5211. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Arizona Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5212. The latent injuries from which Plaintiffs and the Arizona Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5213. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5214. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5215. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5216. Plaintiffs and the Arizona Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5217. Accordingly, Defendant should be required to establish a medical monitoring

program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5218. Plaintiffs and the Arizona Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 278:
Negligence – Failure to Warn Through Proper Expiration Dates – California

5219. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5220. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia

Aragon, individually and on behalf of the California Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5221. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5222. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5223. Under California law, manufacturers have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

5224. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiff that Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5225. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5226. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5227. The latent injuries from which Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5228. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5229. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5230. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5231. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5232. Accordingly, Defendant should be required to establish a medical monitoring

program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5233. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 279:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

5234. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5235. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Glenmark Prescription Medical Monitoring

Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5236. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5237. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5238. Under California law, manufacturers (including Defendant) bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

5239. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

5240. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5241. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate

information to the public, Defendant failed to warn anyone through any medium.

5242. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

5243. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5244. The latent injuries from which Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5245. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5246. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5247. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5248. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5249. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5250. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 280:
Negligent Product Containers – California

5251. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5252. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5253. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5254. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5255. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5256. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5257. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and California

Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5258. The latent injuries from which Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5259. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5260. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5261. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5262. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5263. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5264. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 281:
Negligent Storage and Transportation – California

5265. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury),

as if fully stated herein.

5266. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5267. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5268. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5269. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5270. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5271. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and California Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5272. The latent injuries from which Plaintiffs and the California Glenmark Prescription

Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5273. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5274. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5275. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5276. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5277. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5278. Plaintiffs and the California Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. District of Columbia

COUNT 282:
Negligence – Failure to Warn Through Proper Expiration Dates – District of Columbia

5279. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5280. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Glenmark Prescription Medical Monitoring Class (for the purposes of this

Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5281. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5282. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5283. Under District of Columbia law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

5284. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5285. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5286. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and District of Columbia Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5287. The latent injuries from which Plaintiffs and the District of Columbia Glenmark

Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5288. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5289. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5290. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5291. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5292. Accordingly, Defendant should be required to establish a medical monitoring

program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5293. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 283:
Negligence – Failure to Warn Consumers Through the FDA – District of Columbia

5294. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5295. This cause of action is brought by Kevin Nelson, individually and on behalf of the

District of Columbia Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5296. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5297. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5298. Under District of Columbia law, there exists a duty owed by Defendant under failure to warn and negligence principles to follow FDA reporting requirements and notify the FDA of new information. *See Kubicki ex rel. Kubicki v. Medtronic*, No. CIV.A. 12-00734 CKK, 2013 WL 1739580, at *6–*8 (D.D.C. Mar. 21, 2013) ("[T]he Complaint alleges that Defendants knew, or should have known that technical problems were occurring in the 522 Pump subsequent to PMA approval, but never notified the FDA … despite their obligations under the federal regulations to do so. … Relatedly, the Complaint alleges failure to conduct post-approval market surveillance, including reporting all serious adverse events …. Accordingly, Plaintiffs have sufficiently pled parallel claims….") (citing, *inter alia*, *Stengel v. Medtronic Inc.*, 704 F.3d 1224, 1232–33 (9th Cir. 2013)).

5299. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

5300. The FDA was reasonably expected to disseminate this information. No speculation

is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5301. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

5302. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached Defendant's duty of reasonable care.

5303. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and District of Columbia Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5304. The latent injuries from which Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5305. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5306. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5307. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5308. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5309. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5310. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring

Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 284:
Negligent Product Containers – District Of Columbia

5311. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5312. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5313. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5314. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-

Specific Allegations) as to Defendant.

5315. Under District of Columbia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5316. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5317. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and District of Columbia Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5318. The latent injuries from which Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5319. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5320. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5321. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5322. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5323. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5324. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Glenmark Prescription Medical

Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 285:
Negligent Storage and Transportation – District of Columbia

5325. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5326. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5327. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5328. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5329. Under District of Columbia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5330. Defendant breached this duty by failing to implement or enforce policies to ensure

Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5331. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and District of Columbia Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5332. The latent injuries from which Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5333. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5334. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5335. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of

Columbia Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5336. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5337. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5338. Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 286:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

5339. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5340. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5341. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5342. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5343. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5344. Under Florida law, pharmaceutical manufacturers, including Defendant, have a

duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

5345. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5346. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5347. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Florida Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5348. The latent injuries from which Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5349. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5350. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5351. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5352. Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5353. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5354. Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 287:
Medical Monitoring – Negligent Product Containers – Florida

5355. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5356. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5357. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5358. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5359. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5360. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5361. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5362. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Florida Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5363. The latent injuries from which Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5364. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5365. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

5366. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5367. Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5368. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5369. Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 288:
Medical Monitoring – Negligent Storage and Transportation – Florida

5370. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5371. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5372. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5373. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5374. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5375. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty

to exercise reasonable care in transporting and storing products.

5376. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5377. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Florida Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5378. The latent injuries from which Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5379. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5380. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5381. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5382. Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5383. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5384. Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. Indiana

COUNT 289:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

5385. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5386. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5387. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5388. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5389. Under Indiana law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

5390. Defendant breached this duty for its Ranitidine-Containing Products. The

expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5391. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5392. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5393. The latent injuries from which Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5394. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5395. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

5396. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5397. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5398. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5399. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 290:
Negligence – Failure to Warn Consumers Through the FDA – Indiana

5400. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5401. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5402. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5403. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5404. Indiana law allows a plaintiff to "state[] plausible claims for relief under state law based on an alleged failure to warn the FDA." *McAfee v. Medtronic, Inc.*, No. 1:12-CV-417 RLM, 2015 WL 3617755, at *5 (N.D. Ind. June 4, 2015), *on reconsideration*, No. 1:12-CV-417 RLM, 2016 WL 2588807 (N.D. Ind. May 5, 2016) (rejecting causation). Failures to warn are governed

by negligence principles. Ind. Code Ann. § 34-20-2-2. ("[T]he party making the claim must establish that the manufacturer or seller failed to exercise reasonable care under the circumstances … in providing the warnings or instructions.")

5405. Defendant ultimately owed this duty to warn to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers "fail[] to exercise reasonable care under the circumstances," Ind. Code Ann. § 34-20-2-2, in warning consumers if they fail to warn the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

5406. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5407. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

5408. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

5409. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of

developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5410. The latent injuries from which Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5411. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5412. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5413. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5414. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Glenmark

Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5415. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5416. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 291:
Negligent Product Containers – Indiana

5417. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5418. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5419. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5420. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5421. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5422. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5423. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Indiana Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5424. The latent injuries from which Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally

recommended in the absence of exposure to this risk of harm.

5425. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5426. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5427. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5428. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5429. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5430. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 292:
Negligent Storage and Transportation – Indiana

5431. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5432. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5433. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5434. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5435. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5436. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5437. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Indiana Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5438. The latent injuries from which Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5439. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5440. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5441. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5442. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5443. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5444. Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Glenmark Prescription Medical Monitoring Class members will

continue to face an unreasonable risk of injury and disability and remain undiagnosed.

6. Maryland

COUNT 293:
Negligence – Failure to Warn Through Proper Expiration Dates – Maryland

5445. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5446. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5447. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5448. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5449. Under Maryland law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of a danger it knew or should have had known

about.

5450. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5451. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5452. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5453. The latent injuries from which Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5454. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5455. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5456. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5457. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5458. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5459. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will

continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 294:
Negligence – Failure to Warn Consumers Through the FDA – Maryland

5460. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5461. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5462. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5463. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5464. Under Maryland law, a "failure to warn claim is parallel. Maryland tort law recognizes that a 'duty to warn can undergird a negligence case in ... a product liability action....' *Gourdine v. Crews*, 405 Md. 722, 955 A.2d 769, 779 (2008). Moreover, this duty to warn extends

beyond the time of sale, and requires the manufacturer to make 'reasonable efforts' to convey an effective warning. *Owens–Illinois, Inc. v. Zenobia*, 325 Md. 420, 601 A.2d 633, 646 (1992). And reasonable efforts would, in some circumstances, entail a warning to a third party such as the FDA." *Williams v. Smith & Nephew, Inc.*, 123 F. Supp. 3d 733, 742 (D. Md. 2015).

5465. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

5466. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5467. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

5468. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of to make reasonable efforts to ensure an effective warning reached consumers.

5469. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5470. The latent injuries from which Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5471. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5472. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5473. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5474. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Glenmark Prescription Medical

Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5475. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5476. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 295:
Negligent Product Containers – Maryland

5477. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription

Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5478. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5479. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5480. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5481. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5482. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5483. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Maryland Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5484. The latent injuries from which Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5485. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5486. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5487. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5488. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5489. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Maryland Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5490. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 296:
Negligent Storage and Transportation – Maryland

5491. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5492. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5493. The allegations in this Count apply to Glenmark during the time period in which it

was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5494. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5495. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5496. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5497. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Maryland Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5498. The latent injuries from which Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5499. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5500. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5501. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5502. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5503. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5504. Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk

of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

7. Missouri

COUNT 297:
Negligence – Failure to Warn Through Proper Expiration Dates – Missouri

5505. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5506. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5507. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5508. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-

Specific Allegations) as to Defendant.

5509. Under Missouri law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of the risks of its products.

5510. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5511. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5512. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5513. The latent injuries from which Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5514. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5515. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5516. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5517. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5518. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5519. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products.

Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 298:
Strict Products Liability – Failure to Warn Consumers Through the FDA – Missouri

5520. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5521. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5522. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5523. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5524. Missouri imposes a duty to warn the FDA under "a traditional state law tort cause

of action; specifically, a strict liability failure to warn claim. *See* Mo. Rev. Stat. § 537.760. … [This duty] is instead grounded on a well-established duty imposed on manufacturers by Missouri state law to warn consumers about the risks of using their product, which Williams argues Bayer breached by failing to meet the post-premarket approval reporting requirements ….” *Williams v. Bayer Corp.*, 541 S.W.3d 594, 606 (Mo. Ct. App. 2017).

5525. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

5526. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5527. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

5528. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Manufacturer Defendants also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

5529. As a direct and proximate result of Defendant’s failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of

developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5530. The latent injuries from which Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5531. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5532. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5533. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5534. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Glenmark

Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5535. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5536. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 299:
Negligent Product Containers – Missouri

5537. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5538. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5539. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5540. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5541. Under Missouri law, a manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5542. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5543. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Missouri Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5544. The latent injuries from which Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally

recommended in the absence of exposure to this risk of harm.

5545. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5546. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5547. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5548. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5549. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5550. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 300:
Negligent Storage and Transportation – Missouri

5551. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5552. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5553. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5554. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5555. Under Missouri law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5556. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5557. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Missouri Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5558. The latent injuries from which Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5559. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5560. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5561. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5562. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5563. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5564. Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Glenmark Prescription Medical Monitoring Class members will

continue to face an unreasonable risk of injury and disability and remain undiagnosed.

8. Ohio

COUNT 301:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

5565. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5566. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5567. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5568. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5569. Under Ohio law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

5570. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on each Ranitidine-Containing Product were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5571. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5572. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Ohio Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5573. The latent injuries from which Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5574. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5575. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5576. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5577. Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5578. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5579. Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members will continue

to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 302:
Negligent Product Containers – Ohio

5580. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5581. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5582. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5583. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5584. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5585. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5586. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Ohio Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5587. The latent injuries from which Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5588. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5589. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5590. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5591. Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5592. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5593. Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 303:
Negligent Storage and Transportation – Ohio

5594. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5595. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5596. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5597. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5598. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5599. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Ohio Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5600. The latent injuries from which Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5601. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5602. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5603. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5604. Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5605. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Ohio Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5606. Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

9. Pennsylvania

COUNT 304:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Pennsylvania

5607. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5608. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5609. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5610. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5611. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5612. Under Pennsylvania law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning.

5613. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5614. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5615. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5616. The latent injuries from which Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant

treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5617. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5618. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5619. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5620. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5621. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5622. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 305:
Medical Monitoring – Failure to Warn Consumers Through the FDA – Pennsylvania

5623. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5624. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Glenmark Prescription Medical Monitoring Class

(for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5625. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5626. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5627. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5628. Pennsylvania law "may impose liability for the failure to report to the FDA. …the duty to warn is discharged by 'providing information about the product's dangerous propensities,' which undoubtedly encompasses Medtronic's alleged failures to report known problems, adverse events and malfunctions, and the comment does not require the third party to disclose the warnings, but rather be reasonably relied upon to do so." *Silver v. Medtronic, Inc.*, 236 F. Supp. 3d 889, 900 (M.D. Pa. 2017); *see also McLaughlin v. Bayer Corp.*, 172 F. Supp. 3d 804, 838 (E.D. Pa. 2016) ("we follow the reasoning of the en banc decision in *Stengel*"); *Bull v. St. Jude Med., Inc.*, No. CV 17-1141, 2018 WL 3397544, at *9 (E.D. Pa. July 12, 2018) ("Plaintiff has alleged that St. Jude violated state tort law, namely, by failing to warn physicians about the risks of the Riata ST Lead based on the failure to fully comply with its federal duty to report all adverse events to the FDA via MDRs in a timely manner.").

5629. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

5630. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5631. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

5632. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

5633. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5634. The latent injuries from which Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5635. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5636. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5637. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5638. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5639. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5640. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 306:
Medical Monitoring – Negligent Product Containers – Pennsylvania

5641. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5642. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5643. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in

paragraphs 172-84, which are incorporated by reference.

5644. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5645. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5646. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5647. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5648. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Pennsylvania Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5649. The latent injuries from which Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5650. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

5651. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5652. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5653. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5654. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5655. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing

Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 307:
Medical Monitoring – Negligent Storage and Transportation – Pennsylvania

5656. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5657. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5658. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5659. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5660. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5661. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5662. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5663. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Pennsylvania Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5664. The latent injuries from which Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5665. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

5666. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5667. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5668. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5669. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5670. Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing

Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

10. Utah

COUNT 308:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Utah

5671. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5672. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5673. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5674. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5675. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5676. Under Utah law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of the dangers from a foreseeable use of its product that it knows or should have known about.

5677. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5678. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5679. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Utah Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5680. The latent injuries from which Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5681. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5682. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5683. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5684. Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5685. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5686. Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 309:
Medical Monitoring – Negligent Product Containers – Utah

5687. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5688. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5689. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5690. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5691. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5692. Under Utah law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5693. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5694. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Utah Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5695. The latent injuries from which Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5696. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5697. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

5698. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5699. Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5700. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5701. Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 310:
Medical Monitoring – Negligent Storage and Transportation – Utah

5702. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5703. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5704. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5705. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5706. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5707. Under Utah law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5708. Defendant breached this duty by failing to implement or enforce policies to ensure

Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5709. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Utah Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5710. The latent injuries from which Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5711. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5712. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5713. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses

without adequate treatment will be significantly reduced.

5714. Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5715. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5716. Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

11. West Virginia

COUNT 311:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

5717. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5718. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5719. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5720. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5721. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5722. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

5723. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5724. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5725. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and West Virginia Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5726. The latent injuries from which Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5727. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5728. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5729. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia

Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5730. Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5731. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5732. Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 312:
Medical Monitoring – Negligent Product Containers – West Virginia

5733. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5734. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5735. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5736. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5737. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5738. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5739. Defendant breached this duty by failing to utilize containers that would minimize

the NDMA produced in its Ranitidine-Containing Products.

5740. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and West Virginia Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5741. The latent injuries from which Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5742. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5743. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5744. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5745. Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class

members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5746. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5747. Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 313:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

5748. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5749. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Glenmark Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Glenmark (for the purposes of this Count, "Defendant").

5750. The allegations in this Count apply to Glenmark during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5751. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5752. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5753. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5754. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5755. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer

Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and West Virginia Glenmark Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5756. The latent injuries from which Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5757. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5758. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5759. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5760. Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Glenmark Prescription

Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5761. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Glenmark Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5762. Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Glenmark Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

I. CAUSES OF ACTION AGAINST DEFENDANT SANDOZ WITH RESPECT TO PRESCRIPTION RANITIDINE

5763. Plaintiffs identified in the table below bring claims against Defendant Sandoz with respect to prescription ranitidine on behalf of themselves and their respective State Sandoz Prescription Medical Monitoring Classes under the laws of their respective states of usage. Each

Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Armando Tapia	AZ
Golbenaz Bakhtiar	CA

1. Arizona

COUNT 314:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

5764. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5765. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5766. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5767. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5768. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

5769. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5770. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5771. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Arizona Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5772. The latent injuries from which Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5773. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5774. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5775. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5776. Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5777. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5778. Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 315:
Negligent Product Containers – Arizona

5779. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5780. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5781. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5782. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5783. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5784. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5785. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Arizona Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5786. The latent injuries from which Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5787. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5788. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5789. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5790. Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5791. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5792. Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 316:
Negligent Storage and Transportation – Arizona

5793. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5794. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5795. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5796. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5797. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5798. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5799. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Arizona Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5800. The latent injuries from which Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5801. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5802. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5803. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5804. Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5805. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5806. Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 317:
Negligence – Failure to Warn Through Proper Expiration Dates – California

5807. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5808. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5809. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5810. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5811. Under California law, manufacturers have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

5812. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiff that Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5813. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5814. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5815. The latent injuries from which Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5816. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5817. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5818. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5819. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5820. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5821. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the

Court, Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 318:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

5822. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5823. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5824. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5825. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5826. Under California law, manufacturers (including Defendant) bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes

"a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

5827. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

5828. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5829. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

5830. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

5831. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of

developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5832. The latent injuries from which Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5833. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5834. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5835. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5836. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5837. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5838. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 319:
Negligent Product Containers – California

5839. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury),

as if fully stated herein.

5840. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5841. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5842. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5843. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5844. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5845. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and California Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5846. The latent injuries from which Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5847. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5848. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5849. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5850. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5851. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all California Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5852. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 320:
Negligent Storage and Transportation – California

5853. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5854. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5855. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5856. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5857. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5858. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5859. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and California Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5860. The latent injuries from which Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5861. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5862. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5863. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5864. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5865. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5866. Plaintiffs and the California Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 321:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

5867. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5868. This cause of action is brought by Jeffrey Pisano, individually and on behalf of the Colorado Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5869. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5870. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5871. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5872. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

5873. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5874. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5875. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Colorado Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5876. The latent injuries from which Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5877. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5878. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5879. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5880. Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5881. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Colorado Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5882. Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 322:
Medical Monitoring – Negligent Product Containers – Colorado

5883. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5884. This cause of action is brought by Jeffrey Pisano, individually and on behalf of the Colorado Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5885. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5886. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5887. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5888. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5889. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5890. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Colorado Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5891. The latent injuries from which Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5892. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5893. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5894. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5895. Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5896. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5897. Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 323:
Medical Monitoring – Negligent Storage and Transportation – Colorado

5898. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5899. This cause of action is brought by Jeffrey Pisano, individually and on behalf of the Colorado Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5900. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5901. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-

Specific Allegations) as to Defendant.

5902. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5903. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5904. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5905. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Colorado Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5906. The latent injuries from which Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5907. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5908. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5909. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5910. Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5911. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5912. Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. District of Columbia

COUNT 324:
Negligence – Failure to Warn Through Proper Expiration Dates – District of Columbia

5913. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5914. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5915. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5916. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5917. Under District of Columbia law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

5918. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5919. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5920. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and District of Columbia Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5921. The latent injuries from which Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5922. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5923. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5924. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5925. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5926. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5927. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 325:
Negligence – Failure to Warn Consumers Through the FDA – District of Columbia

5928. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5929. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5930. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5931. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

5932. Under District of Columbia law, there exists a duty owed by Defendant under failure to warn and negligence principles to follow FDA reporting requirements and notify the FDA of new information. *See Kubicki ex rel. Kubicki v. Medtronic*, No. CIV.A. 12-00734 CKK, 2013 WL 1739580, at *6–*8 (D.D.C. Mar. 21, 2013) ("[T]he Complaint alleges that Defendants knew, or should have known that technical problems were occurring in the 522 Pump subsequent to PMA approval, but never notified the FDA … despite their obligations under the federal regulations to do so. … Relatedly, the Complaint alleges failure to conduct post-approval market surveillance, including reporting all serious adverse events …. Accordingly, Plaintiffs have sufficiently pled parallel claims….") (citing, *inter alia*, *Stengel v. Medtronic Inc.*, 704 F.3d 1224, 1232–33 (9th Cir. 2013)).

5933. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

5934. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

5935. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather

than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

5936. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached Defendant's duty of reasonable care.

5937. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and District of Columbia Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5938. The latent injuries from which Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5939. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5940. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5941. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5942. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5943. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5944. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or

established by the Court, Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 326:
Negligent Product Containers – District of Columbia

5945. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5946. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5947. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5948. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5949. Under District of Columbia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5950. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5951. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and District of Columbia Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5952. The latent injuries from which Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5953. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5954. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5955. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5956. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5957. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5958. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 327:
Negligent Storage and Transportation – District of Columbia

5959. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5960. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5961. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5962. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

5963. Under District of Columbia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

5964. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

5965. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and District of Columbia Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5966. The latent injuries from which Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5967. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5968. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5969. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5970. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5971. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5972. Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. Florida

COUNT 328:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

5973. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5974. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Galloway, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5975. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5976. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

5977. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5978. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light

of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

5979. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

5980. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

5981. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Florida Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5982. The latent injuries from which Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5983. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5984. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

5985. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

5986. Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

5987. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

5988. Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 329:
Medical Monitoring – Negligent Product Containers – Florida

5989. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

5990. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Galloway, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

5991. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

5992. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

5993. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

5994. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

5995. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

5996. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Florida Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

5997. The latent injuries from which Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

5998. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

5999. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6000. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6001. Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6002. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6003. Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 330:
Medical Monitoring – Negligent Storage and Transportation – Florida

6004. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6005. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Galloway, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6006. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6007. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6008. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6009. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6010. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6011. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Florida Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6012. The latent injuries from which Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6013. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6014. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6015. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6016. Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6017. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6018. Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

6. Indiana

COUNT 331:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

6019. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6020. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6021. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6022. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6023. Under Indiana law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

6024. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6025. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6026. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6027. The latent injuries from which Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6028. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6029. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6030. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6031. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6032. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6033. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 332:
Negligence – Failure to Warn Consumers Through the FDA – Indiana

6034. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6035. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6036. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6037. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6038. Indiana law allows a plaintiff to "state[] plausible claims for relief under state law based on an alleged failure to warn the FDA." *McAfee v. Medtronic, Inc.*, No. 1:12-CV-417 RLM, 2015 WL 3617755, at *5 (N.D. Ind. June 4, 2015), *on reconsideration*, No. 1:12-CV-417 RLM, 2016 WL 2588807 (N.D. Ind. May 5, 2016) (rejecting causation). Failures to warn are governed by negligence principles. Ind. Code Ann. § 34-20-2-2. ("[T]he party making the claim must establish that the manufacturer or seller failed to exercise reasonable care under the circumstances … in providing the warnings or instructions.")

6039. Defendant ultimately owed this duty to warn to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers "fail[] to exercise reasonable care under the circumstances," Ind. Code Ann. § 34-20-2-2, in warning consumers if they fail to warn the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

6040. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6041. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6042. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that

were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

6043. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6044. The latent injuries from which Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6045. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6046. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6047. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6048. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6049. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6050. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 333:
Negligent Product Containers – Indiana

6051. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6052. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6053. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6054. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6055. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6056. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6057. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Indiana Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6058. The latent injuries from which Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6059. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6060. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6061. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6062. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6063. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6064. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 334:
Negligent Storage and Transportation – Indiana

6065. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6066. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6067. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6068. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6069. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6070. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6071. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Indiana Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6072. The latent injuries from which Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6073. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6074. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6075. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6076. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6077. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Indiana Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6078. Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

7. Maryland

COUNT 335:
Negligence – Failure to Warn Through Proper Expiration Dates – Maryland

6079. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6080. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6081. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6082. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6083. Under Maryland law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of a danger it knew or should have had known about.

6084. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6085. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6086. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6087. The latent injuries from which Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6088. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6089. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6090. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6091. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6092. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Maryland Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6093. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 336:
Negligence – Failure to Warn Consumers Through the FDA – Maryland

6094. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6095. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6096. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6097. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6098. Under Maryland law, a "failure to warn claim is parallel. Maryland tort law recognizes that a 'duty to warn can undergird a negligence case in ... a product liability action....' *Gourdine v. Crews*, 405 Md. 722, 955 A.2d 769, 779 (2008). Moreover, this duty to warn extends beyond the time of sale, and requires the manufacturer to make 'reasonable efforts' to convey an effective warning. *Owens–Illinois, Inc. v. Zenobia*, 325 Md. 420, 601 A.2d 633, 646 (1992). And reasonable efforts would, in some circumstances, entail a warning to a third party such as the FDA." *Williams v. Smith & Nephew, Inc.*, 123 F. Supp. 3d 733, 742 (D. Md. 2015).

6099. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

6100. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6101. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather

than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6102. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of to make reasonable efforts to ensure an effective warning reached consumers.

6103. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6104. The latent injuries from which Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6105. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6106. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6107. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6108. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6109. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6110. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 337:
Negligent Product Containers – Maryland

6111. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6112. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6113. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6114. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6115. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6116. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6117. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Maryland Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6118. The latent injuries from which Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6119. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6120. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6121. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6122. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6123. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6124. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 338:
Negligent Storage and Transportation – Maryland

6125. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6126. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6127. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6128. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6129. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6130. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6131. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Maryland Sandoz Prescription Medical Monitoring Class members have sustained a significantly

increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6132. The latent injuries from which Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6133. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6134. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6135. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6136. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6137. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6138. Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

8. Missouri

COUNT 339:
Negligence – Failure to Warn Through Proper Expiration Dates – Missouri

6139. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription

Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6140. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6141. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6142. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6143. Under Missouri law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of the risks of its products.

6144. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6145. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6146. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of

developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6147. The latent injuries from which Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6148. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6149. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6150. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6151. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6152. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6153. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 340:
Strict Products Liability – Failure to Warn Consumers Through the FDA – Missouri

6154. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury),

as if fully stated herein.

6155. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron , individually and on behalf of the Missouri Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6156. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6157. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6158. Missouri imposes a duty to warn the FDA under "a traditional state law tort cause of action; specifically, a strict liability failure to warn claim. *See* Mo. Rev. Stat. § 537.760. … [This duty] is instead grounded on a well-established duty imposed on manufacturers by Missouri state law to warn consumers about the risks of using their product, which Williams argues Bayer breached by failing to meet the post-premarket approval reporting requirements …." *Williams v. Bayer Corp.*, 541 S.W.3d 594, 606 (Mo. Ct. App. 2017).

6159. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

6160. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6161. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6162. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Manufacturer Defendants also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

6163. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6164. The latent injuries from which Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6165. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6166. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6167. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6168. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6169. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6170. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 341:
Negligent Product Containers – Missouri

6171. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6172. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6173. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6174. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6175. Under Missouri law, a manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6176. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6177. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Missouri Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6178. The latent injuries from which Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6179. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6180. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6181. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6182. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6183. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6184. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 342:
Negligent Storage and Transportation – Missouri

6185. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6186. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6187. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6188. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6189. Under Missouri law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6190. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6191. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Missouri Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6192. The latent injuries from which Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6193. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6194. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6195. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6196. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6197. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6198. Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

9. Ohio

COUNT 343:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

6199. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6200. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6201. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6202. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6203. Under Ohio law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

6204. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on each Ranitidine-Containing Product were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6205. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs

would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6206. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Ohio Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6207. The latent injuries from which Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6208. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6209. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6210. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6211. Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6212. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6213. Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 344:
Negligent Product Containers – Ohio

6214. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6215. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6216. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6217. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6218. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6219. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6220. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Ohio Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6221. The latent injuries from which Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6222. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6223. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6224. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6225. Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6226. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6227. Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 345:
Negligent Storage and Transportation – Ohio

6228. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6229. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6230. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6231. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6232. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6233. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6234. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Ohio Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6235. The latent injuries from which Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6236. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6237. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6238. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6239. Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6240. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Ohio Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6241. Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

10. Pennsylvania

COUNT 346:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Pennsylvania

6242. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6243. This cause of action is brought by Felicia Ball and Joyce Guerrieri, individually and on behalf of the Pennsylvania Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6244. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6245. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6246. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6247. Under Pennsylvania law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning.

6248. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6249. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6250. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6251. The latent injuries from which Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6252. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6253. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6254. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6255. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6256. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6257. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 347:
Medical Monitoring – Failure to Warn Consumers Through the FDA – Pennsylvania

6258. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6259. This cause of action is brought by Felicia Ball and Joyce Guerrieri , individually and on behalf of the Pennsylvania Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6260. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6261. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6262. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6263. Pennsylvania law "may impose liability for the failure to report to the FDA. …the duty to warn is discharged by 'providing information about the product's dangerous propensities,' which undoubtedly encompasses Medtronic's alleged failures to report known problems, adverse events and malfunctions, and the comment does not require the third party to disclose the warnings, but rather be reasonably relied upon to do so." *Silver v. Medtronic, Inc.*, 236 F. Supp. 3d 889, 900 (M.D. Pa. 2017); *see also McLaughlin v. Bayer Corp.*, 172 F. Supp. 3d 804, 838 (E.D. Pa. 2016) ("we follow the reasoning of the en banc decision in *Stengel*"); *Bull v. St. Jude Med., Inc.*, No. CV 17-1141, 2018 WL 3397544, at *9 (E.D. Pa. July 12, 2018) ("Plaintiff has alleged that St. Jude violated state tort law, namely, by failing to warn physicians about the risks of the Riata ST Lead based on the failure to fully comply with its federal duty to report all adverse events to the FDA via MDRs in a timely manner.").

6264. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

6265. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6266. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6267. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

6268. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6269. The latent injuries from which Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6270. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6271. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6272. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6273. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6274. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6275. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 348:
Medical Monitoring – Negligent Product Containers – Pennsylvania

6276. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6277. This cause of action is brought by Felicia Ball and Joyce Guerrieri , individually and on behalf of the Pennsylvania Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6278. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6279. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6280. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6281. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6282. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6283. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Pennsylvania Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6284. The latent injuries from which Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6285. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6286. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6287. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6288. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6289. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6290. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring

Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 349:
Medical Monitoring – Negligent Storage and Transportation – Pennsylvania

6291. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6292. This cause of action is brought by Felicia Ball and Joyce Guerrieri , individually and on behalf of the Pennsylvania Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6293. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6294. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6295. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6296. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6297. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6298. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Pennsylvania Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6299. The latent injuries from which Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6300. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6301. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6302. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6303. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6304. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6305. Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Sandoz Prescription Medical Monitoring

Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

11. Utah

COUNT 350:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Utah

6306. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6307. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6308. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6309. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6310. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6311. Under Utah law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of the dangers from a foreseeable use of its product that it knows or should have known about.

6312. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6313. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6314. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Utah Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6315. The latent injuries from which Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6316. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6317. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6318. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6319. Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6320. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6321. Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 351:
Medical Monitoring – Negligent Product Containers – Utah

6322. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6323. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6324. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6325. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6326. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6327. Under Utah law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6328. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6329. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Utah Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6330. The latent injuries from which Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6331. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6332. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6333. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6334. Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6335. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6336. Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 352:
Medical Monitoring – Negligent Storage and Transportation – Utah

6337. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6338. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6339. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6340. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6341. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6342. Under Utah law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6343. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6344. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Utah Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6345. The latent injuries from which Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6346. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6347. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6348. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6349. Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6350. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6351. Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

12. West Virginia

COUNT 353:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

6352. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6353. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6354. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6355. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6356. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6357. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

6358. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6359. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6360. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and West Virginia Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6361. The latent injuries from which Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6362. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6363. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6364. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6365. Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6366. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6367. Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 354:
Medical Monitoring – Negligent Product Containers – West Virginia

6368. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6369. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6370. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6371. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6372. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6373. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6374. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6375. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and West Virginia Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6376. The latent injuries from which Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6377. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6378. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6379. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6380. Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6381. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6382. Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 355:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

6383. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6384. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Sandoz Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Sandoz (for the purposes of this Count, "Defendant").

6385. The allegations in this Count apply to Sandoz during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6386. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6387. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6388. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6389. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6390. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer

Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and West Virginia Sandoz Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6391. The latent injuries from which Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6392. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6393. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6394. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6395. Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Sandoz Prescription Medical

Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6396. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Sandoz Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6397. Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Sandoz Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

J. CAUSES OF ACTION AGAINST DEFENDANT STRIDES WITH RESPECT TO PRESCRIPTION RANITIDINE

5188. Plaintiffs identified in the table below bring claims against Defendant Strides with respect to prescription ranitidine on behalf of themselves and their respective State Strides Prescription Medical Monitoring Classes under the laws of their respective states of usage. Each

Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**

1. Arizona

COUNT 356:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

6398. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6399. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6400. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6401. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6402. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

6403. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6404. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6405. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Arizona Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6406. The latent injuries from which Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6407. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6408. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6409. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6410. Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6411. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Arizona Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6412. Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 357:
Negligent Product Containers – Arizona

6413. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6414. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6415. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6416. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6417. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6418. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6419. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Arizona Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6420. The latent injuries from which Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6421. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6422. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6423. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6424. Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6425. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6426. Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 358:
Negligent Storage and Transportation – Arizona

6427. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6428. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6429. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6430. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6431. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6432. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6433. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Arizona Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6434. The latent injuries from which Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6435. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6436. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6437. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6438. Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6439. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6440. Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 359:
Negligence – Failure to Warn Through Proper Expiration Dates – California

6441. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6442. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, Virginia Aragon, individually and on behalf of the California Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6443. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6444. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6445. Under California law, manufacturers have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

6446. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiff that Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6447. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6448. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6449. The latent injuries from which Plaintiffs and the California Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6450. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6451. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6452. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6453. Plaintiffs and the California Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6454. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6455. Plaintiffs and the California Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the California Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 360:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

6456. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6457. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6458. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6459. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6460. Under California law, manufacturers (including Defendant) bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes

"a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

6461. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

6462. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6463. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

6464. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

6465. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of

developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6466. The latent injuries from which Plaintiffs and the California Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6467. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6468. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6469. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6470. Plaintiffs and the California Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6471. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6472. Plaintiffs and the California Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 361:
Negligent Product Containers – California

6473. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury),

as if fully stated herein.

6474. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6475. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6476. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6477. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6478. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6479. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and California Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6480. The latent injuries from which Plaintiffs and the California Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6481. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6482. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6483. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6484. Plaintiffs and the California Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6485. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all California Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6486. Plaintiffs and the California Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 362:
Negligent Storage and Transportation – California

6487. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6488. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6489. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6490. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6491. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6492. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6493. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and California Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6494. The latent injuries from which Plaintiffs and the California Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6495. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6496. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6497. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6498. Plaintiffs and the California Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6499. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6500. Plaintiffs and the California Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. District of Columbia

COUNT 363:
Negligence – Failure to Warn Through Proper Expiration Dates – District of Columbia

6501. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6502. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6503. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6504. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6505. Under District of Columbia law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

6506. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6507. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6508. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and District of Columbia Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6509. The latent injuries from which Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject

Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6510. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6511. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6512. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6513. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6514. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all District of Columbia Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6515. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 364:
Negligence – Failure to Warn Consumers Through the FDA – District of Columbia

6516. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6517. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6518. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6519. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6520. Under District of Columbia law, there exists a duty owed by Defendant under failure to warn and negligence principles to follow FDA reporting requirements and notify the FDA of new information. *See Kubicki ex rel. Kubicki v. Medtronic*, No. CIV.A. 12-00734 CKK, 2013 WL 1739580, at *6–*8 (D.D.C. Mar. 21, 2013) ("[T]he Complaint alleges that Defendants knew, or should have known that technical problems were occurring in the 522 Pump subsequent to PMA approval, but never notified the FDA … despite their obligations under the federal regulations to do so. … Relatedly, the Complaint alleges failure to conduct post-approval market surveillance, including reporting all serious adverse events …. Accordingly, Plaintiffs have sufficiently pled parallel claims….") (citing, *inter alia*, *Stengel v. Medtronic Inc.*, 704 F.3d 1224, 1232–33 (9th Cir. 2013)).

6521. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

6522. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6523. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

6524. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached Defendant's duty of reasonable care.

6525. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and District of Columbia Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6526. The latent injuries from which Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6527. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6528. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6529. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6530. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6531. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6532. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them

for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 365:
Negligent Product Containers – District of Columbia

6533. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6534. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6535. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6536. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6537. Under District of Columbia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6538. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6539. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and District of Columbia Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6540. The latent injuries from which Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6541. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6542. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6543. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6544. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6545. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6546. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 366:
Negligent Storage and Transportation – District of Columbia

6547. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6548. This cause of action is brought by Kevin Nelson, individually and on behalf of the District of Columbia Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6549. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6550. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6551. Under District of Columbia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6552. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6553. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and District of Columbia Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6554. The latent injuries from which Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6555. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6556. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6557. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6558. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6559. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all District of Columbia Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6560. Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the District of Columbia Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 367:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

6561. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6562. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6563. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6564. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6565. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6566. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light

of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

6567. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6568. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6569. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Florida Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6570. The latent injuries from which Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6571. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6572. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6573. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6574. Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6575. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6576. Plaintiffs and the Florida Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 368:
Medical Monitoring – Negligent Product Containers – Florida

6577. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6578. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6579. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6580. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6581. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6582. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6583. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6584. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Florida Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6585. The latent injuries from which Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6586. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6587. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6588. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6589. Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6590. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6591. Plaintiffs and the Florida Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 369:
Medical Monitoring – Negligent Storage and Transportation – Florida

6592. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6593. This cause of action is brought by Ana Pereira, Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Jeannie Black, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Tomlinson, Sonia Diaz, and Karen Foster, individually and on behalf of the Florida Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6594. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6595. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6596. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6597. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6598. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6599. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Florida Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6600. The latent injuries from which Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6601. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6602. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6603. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6604. Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6605. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6606. Plaintiffs and the Florida Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. Indiana

COUNT 370:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

6607. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6608. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6609. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6610. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6611. Under Indiana law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

6612. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6613. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6614. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6615. The latent injuries from which Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6616. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6617. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6618. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6619. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6620. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6621. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 371:
Negligence – Failure to Warn Consumers Through the FDA – Indiana

6622. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6623. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6624. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6625. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6626. Indiana law allows a plaintiff to "state[] plausible claims for relief under state law based on an alleged failure to warn the FDA." *McAfee v. Medtronic, Inc.*, No. 1:12-CV-417 RLM, 2015 WL 3617755, at *5 (N.D. Ind. June 4, 2015), *on reconsideration*, No. 1:12-CV-417 RLM, 2016 WL 2588807 (N.D. Ind. May 5, 2016) (rejecting causation). Failures to warn are governed by negligence principles. Ind. Code Ann. § 34-20-2-2. ("[T]he party making the claim must establish that the manufacturer or seller failed to exercise reasonable care under the circumstances … in providing the warnings or instructions.")

6627. Defendant ultimately owed this duty to warn to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers "fail[] to exercise reasonable care under the circumstances," Ind. Code Ann. § 34-20-2-2, in warning consumers if they fail to warn the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

6628. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6629. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6630. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that

were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

6631. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6632. The latent injuries from which Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6633. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6634. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6635. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6636. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6637. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6638. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 372:
Negligent Product Containers – Indiana

6639. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6640. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6641. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6642. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6643. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6644. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6645. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Indiana Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6646. The latent injuries from which Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6647. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6648. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6649. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6650. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6651. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6652. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 373:
Negligent Storage and Transportation – Indiana

6653. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6654. This cause of action is brought by Rebecca Sizemore, Teresa Dowler, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6655. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6656. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6657. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6658. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6659. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Indiana Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6660. The latent injuries from which Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6661. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6662. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6663. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6664. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6665. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6666. Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

6. Maryland

COUNT 374:
Negligence – Failure to Warn Through Proper Expiration Dates – Maryland

6667. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6668. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6669. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6670. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6671. Under Maryland law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of a danger it knew or should have had known about.

6672. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6673. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6674. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6675. The latent injuries from which Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6676. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6677. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6678. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6679. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6680. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Maryland Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6681. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 375:
Negligence – Failure to Warn Consumers Through the FDA – Maryland

6682. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6683. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6684. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6685. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6686. Under Maryland law, a "failure to warn claim is parallel. Maryland tort law recognizes that a 'duty to warn can undergird a negligence case in ... a product liability action....' *Gourdine v. Crews*, 405 Md. 722, 955 A.2d 769, 779 (2008). Moreover, this duty to warn extends beyond the time of sale, and requires the manufacturer to make 'reasonable efforts' to convey an effective warning. *Owens–Illinois, Inc. v. Zenobia*, 325 Md. 420, 601 A.2d 633, 646 (1992). And reasonable efforts would, in some circumstances, entail a warning to a third party such as the FDA." *Williams v. Smith & Nephew, Inc.*, 123 F. Supp. 3d 733, 742 (D. Md. 2015).

6687. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

6688. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6689. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather

than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6690. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of to make reasonable efforts to ensure an effective warning reached consumers.

6691. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6692. The latent injuries from which Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6693. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6694. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6695. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6696. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6697. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6698. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 376:
Negligent Product Containers – Maryland

6699. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6700. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6701. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6702. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6703. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6704. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6705. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Maryland Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6706. The latent injuries from which Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6707. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6708. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6709. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6710. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6711. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6712. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 377:
Negligent Storage and Transportation – Maryland

6713. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6714. This cause of action is brought by Alberta Griffin and Darlene Whittington-Coates, individually and on behalf of the Maryland Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6715. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6716. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6717. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6718. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6719. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Maryland Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have

suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6720. The latent injuries from which Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6721. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6722. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6723. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6724. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6725. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6726. Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

7. Missouri

COUNT 378:
Negligence – Failure to Warn Through Proper Expiration Dates – Missouri

6727. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription

Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6728. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6729. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6730. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6731. Under Missouri law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of the risks of its products.

6732. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6733. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6734. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of

developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6735. The latent injuries from which Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6736. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6737. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6738. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6739. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay

for the medical monitoring and diagnosis of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6740. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6741. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 379:
Strict Products Liability – Failure to Warn Consumers Through the FDA – Missouri

6742. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury),

as if fully stated herein.

6743. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6744. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6745. Missouri imposes a duty to warn the FDA under "a traditional state law tort cause of action; specifically, a strict liability failure to warn claim. *See* Mo. Rev. Stat. § 537.760. … [This duty] is instead grounded on a well-established duty imposed on manufacturers by Missouri state law to warn consumers about the risks of using their product, which Williams argues Bayer breached by failing to meet the post-premarket approval reporting requirements …." *Williams v. Bayer Corp.*, 541 S.W.3d 594, 606 (Mo. Ct. App. 2017).

6746. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

6747. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6748. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather

than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6749. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Manufacturer Defendants also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

6750. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6751. The latent injuries from which Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6752. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6753. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6754. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6755. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6756. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6757. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 380:
Negligent Product Containers – Missouri

6758. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6759. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6760. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6761. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6762. Under Missouri law, a manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6763. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6764. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Missouri Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6765. The latent injuries from which Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6766. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6767. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6768. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6769. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6770. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6771. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 381:
Negligent Storage and Transportation – Missouri

6772. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6773. This cause of action is brought by Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6774. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6775. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6776. Under Missouri law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6777. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6778. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Missouri Strides Prescription Medical Monitoring Class members have sustained a

significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6779. The latent injuries from which Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6780. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6781. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6782. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6783. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay

for the medical monitoring and diagnosis of Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6784. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6785. Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

8. Ohio

COUNT 382:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

6786. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription

Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6787. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6788. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6789. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6790. Under Ohio law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

6791. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on each Ranitidine-Containing Product were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6792. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6793. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Ohio Strides Prescription

Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6794. The latent injuries from which Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6795. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6796. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6797. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6798. Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6799. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6800. Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 383:
Negligent Product Containers – Ohio

6801. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury),

as if fully stated herein.

6802. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6803. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6804. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6805. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6806. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6807. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Ohio Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6808. The latent injuries from which Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6809. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6810. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6811. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6812. Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6813. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Ohio Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6814. Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 384:
Negligent Storage and Transportation – Ohio

6815. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6816. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6817. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6818. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6819. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6820. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6821. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Ohio Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6822. The latent injuries from which Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6823. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6824. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6825. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6826. Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6827. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6828. Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

9. Pennsylvania

COUNT 385:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Pennsylvania

6829. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6830. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6831. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6832. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6833. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6834. Under Pennsylvania law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning.

6835. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6836. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6837. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6838. The latent injuries from which Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6839. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6840. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6841. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6842. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6843. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6844. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 386:
Medical Monitoring – Failure to Warn Consumers Through the FDA – Pennsylvania

6845. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6846. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6847. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6848. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

6849. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6850. Pennsylvania law "may impose liability for the failure to report to the FDA. …the duty to warn is discharged by 'providing information about the product's dangerous propensities,' which undoubtedly encompasses Medtronic's alleged failures to report known problems, adverse events and malfunctions, and the comment does not require the third party to disclose the warnings, but rather be reasonably relied upon to do so." *Silver v. Medtronic, Inc.*, 236 F. Supp. 3d 889, 900 (M.D. Pa. 2017); *see also McLaughlin v. Bayer Corp.*, 172 F. Supp. 3d 804, 838 (E.D. Pa. 2016) ("we follow the reasoning of the en banc decision in *Stengel*"); *Bull v. St. Jude Med., Inc.*, No. CV 17-1141, 2018 WL 3397544, at *9 (E.D. Pa. July 12, 2018) ("Plaintiff has alleged that St. Jude violated state tort law, namely, by failing to warn physicians about the risks of the Riata ST Lead based on the failure to fully comply with its federal duty to report all adverse events to the FDA via MDRs in a timely manner.").

6851. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

6852. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

6853. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

6854. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

6855. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6856. The latent injuries from which Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6857. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6858. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6859. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6860. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6861. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6862. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 387:
Medical Monitoring – Negligent Product Containers – Pennsylvania

6863. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6864. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6865. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6866. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6867. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6868. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6869. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6870. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Pennsylvania Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6871. The latent injuries from which Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6872. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6873. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6874. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6875. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6876. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6877. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the

Court, Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 388:
Medical Monitoring – Negligent Storage and Transportation – Pennsylvania

6878. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6879. This cause of action is brought by Elmer Cook, Felicia Ball, and Joyce Guerrieri, individually and on behalf of the Pennsylvania Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6880. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6881. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6882. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6883. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6884. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6885. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Pennsylvania Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6886. The latent injuries from which Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6887. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6888. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6889. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6890. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6891. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6892. Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the

Court, Plaintiffs and the Pennsylvania Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

10. Utah

COUNT 389:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Utah

6893. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6894. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6895. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6896. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) Defendant.

6897. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6898. Under Utah law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of the dangers from a foreseeable use of its product that it knows or should have known about.

6899. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6900. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6901. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Utah Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6902. The latent injuries from which Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6903. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6904. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6905. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6906. Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6907. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6908. Plaintiffs and the Utah Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 390:
Medical Monitoring – Negligent Product Containers – Utah

6909. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6910. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6911. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6912. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6913. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6914. Under Utah law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6915. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6916. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Utah Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6917. The latent injuries from which Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6918. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6919. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6920. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6921. Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6922. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6923. Plaintiffs and the Utah Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 391:
Medical Monitoring – Negligent Storage and Transportation – Utah

6924. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6925. This cause of action is brought by Teresa Waters, individually and on behalf of the Utah Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6926. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6927. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6928. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6929. Under Utah law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6930. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6931. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Utah Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6932. The latent injuries from which Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6933. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6934. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6935. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6936. Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6937. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Utah Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6938. Plaintiffs and the Utah Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Utah Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

11. West Virginia

COUNT 392:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

6939. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6940. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6941. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6942. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6943. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6944. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

6945. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6946. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6947. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and West Virginia Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6948. The latent injuries from which Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6949. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6950. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6951. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6952. Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6953. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6954. Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 393:
Medical Monitoring – Negligent Product Containers – West Virginia

6955. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6956. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6957. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6958. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

6959. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6960. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

6961. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

6962. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and West Virginia Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6963. The latent injuries from which Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6964. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6965. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6966. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6967. Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6968. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6969. Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 394:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

6970. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6971. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

6972. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6973. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

6974. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

6975. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

6976. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

6977. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic

Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and West Virginia Strides Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6978. The latent injuries from which Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6979. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6980. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6981. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6982. Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program

which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6983. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

6984. Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

K. CAUSES OF ACTION AGAINST DEFENDANT TEVA WITH RESPECT TO PRESCRIPTION RANITIDINE

6985. Plaintiffs identified in the table below bring claims against Defendant Teva with respect to prescription ranitidine on behalf of themselves and their respective State Teva Prescription Medical Monitoring Classes under the laws of their respective states of usage. Each

Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Armando Tapia	AZ
Golbenaz Bakhtiar	CA

1. Arizona

COUNT 395:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

6986. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

6987. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

6988. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

6989. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

6990. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

6991. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

6992. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

6993. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Arizona Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

6994. The latent injuries from which Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

6995. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

6996. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

6997. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

6998. Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

6999. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7000. Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 396:
Negligent Product Containers – Arizona

7001. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7002. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7003. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7004. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-

Specific Allegations) as to Defendant.

7005. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7006. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7007. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Arizona Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7008. The latent injuries from which Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7009. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7010. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7011. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7012. Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7013. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7014. Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 397:
Negligent Storage and Transportation – Arizona

7015. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7016. This cause of action is brought by Armando Tapia, individually and on behalf of the Arizona Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7017. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7018. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7019. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7020. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7021. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer

Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Arizona Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7022. The latent injuries from which Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7023. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7024. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7025. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7026. Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7027. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7028. Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 398:
Negligence – Failure to Warn Through Proper Expiration Dates – California

7029. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7030. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7031. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7032. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7033. Under California law, manufacturers have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

7034. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiff that Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7035. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7036. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7037. The latent injuries from which Plaintiffs and the California Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7038. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7039. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7040. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7041. Plaintiffs and the California Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the California Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7042. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7043. Plaintiffs and the California Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 399:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

7044. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7045. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7046. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7047. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

7048. Under California law, manufacturers (including Defendant) bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

7049. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

7050. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

7051. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

7052. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

7053. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7054. The latent injuries from which Plaintiffs and the California Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7055. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7056. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7057. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7058. Plaintiffs and the California Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7059. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7060. Plaintiffs and the California Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 400:
Negligent Product Containers – California

7061. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7062. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7063. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7064. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7065. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7066. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7067. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and California Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7068. The latent injuries from which Plaintiffs and the California Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7069. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7070. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7071. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7072. Plaintiffs and the California Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7073. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7074. Plaintiffs and the California Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the California Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 401:
Negligent Storage and Transportation – California

7075. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7076. This cause of action is brought by Golbenaz Bakhtiar, Royal Handy, and Virginia Aragon, individually and on behalf of the California Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7077. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7078. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7079. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7080. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7081. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and California Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7082. The latent injuries from which Plaintiffs and the California Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7083. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7084. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7085. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7086. Plaintiffs and the California Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7087. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7088. Plaintiffs and the California Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 402:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

7089. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7090. This cause of action is brought by Jeffrey Pisano, individually and on behalf of the Colorado Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7091. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7092. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7093. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7094. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

7095. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7096. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7097. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Colorado Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7098. The latent injuries from which Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7099. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7100. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7101. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7102. Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7103. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7104. Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 403:
Medical Monitoring – Negligent Product Containers – Colorado

7105. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7106. This cause of action is brought by Jeffrey Pisano, individually and on behalf of the Colorado Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7107. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7108. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7109. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7110. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7111. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7112. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Colorado Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7113. The latent injuries from which Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7114. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7115. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7116. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7117. Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7118. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7119. Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 404:
Medical Monitoring – Negligent Storage and Transportation – Colorado

7120. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7121. This cause of action is brought by Jeffrey Pisano, individually and on behalf of the Colorado Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7122. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7123. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7124. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7125. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7126. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7127. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Colorado Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7128. The latent injuries from which Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7129. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7130. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7131. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7132. Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7133. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7134. Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 405:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

7135. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7136. This cause of action is brought by Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Joyce Taylor, Alexander Monger, Laura Monger, Marva Mccall, Michael Fesser, Michael Galloway, Michael Tomlinson, and Karen Foster, individually and on behalf of the Florida Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7137. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7138. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7139. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7140. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7141. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7142. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7143. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Florida Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7144. The latent injuries from which Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7145. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7146. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7147. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7148. Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7149. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7150. Plaintiffs and the Florida Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 406:
Medical Monitoring – Negligent Product Containers – Florida

7151. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7152. This cause of action is brought by Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Joyce Taylor, Marva Mccall, Michael Fesser, Michael Galloway, Michael Tomlinson, and Karen Foster, individually and on behalf of the Florida Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7153. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7154. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7155. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7156. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7157. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7158. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Florida Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7159. The latent injuries from which Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7160. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7161. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7162. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7163. Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7164. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7165. Plaintiffs and the Florida Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 407:
Medical Monitoring – Negligent Storage and Transportation – Florida

7166. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7167. This cause of action is brought by Clifton McKinnon, Daniel Taylor, Hattie Kelley, Irma Arcaya, Joyce Taylor, Alexander Monger, Laura Monger, Marva Mccall, Michael Fesser, Michael Galloway, Michael Tomlinson, and Karen Foster, individually and on behalf of the Florida Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7168. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7169. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7170. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7171. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7172. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7173. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Florida Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7174. The latent injuries from which Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7175. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7176. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7177. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7178. Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7179. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7180. Plaintiffs and the Florida Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. Indiana

COUNT 408:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

7181. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7182. This cause of action is brought by Rebecca Sizemore, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7183. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7184. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7185. Under Indiana law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

7186. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7187. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7188. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7189. The latent injuries from which Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7190. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7191. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7192. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7193. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7194. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7195. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 409:
Negligence – Failure to Warn Consumers Through the FDA – Indiana

7196. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7197. This cause of action is brought by Rebecca Sizemore, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7198. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7199. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

7200. Indiana law allows a plaintiff to "state[] plausible claims for relief under state law based on an alleged failure to warn the FDA." *McAfee v. Medtronic, Inc.*, No. 1:12-CV-417 RLM, 2015 WL 3617755, at *5 (N.D. Ind. June 4, 2015), *on reconsideration*, No. 1:12-CV-417 RLM, 2016 WL 2588807 (N.D. Ind. May 5, 2016) (rejecting causation). Failures to warn are governed by negligence principles. Ind. Code Ann. § 34-20-2-2. ("[T]he party making the claim must establish that the manufacturer or seller failed to exercise reasonable care under the circumstances … in providing the warnings or instructions.")

7201. Defendant ultimately owed this duty to warn to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers "fail[] to exercise reasonable care under the circumstances," Ind. Code Ann. § 34-20-2-2, in warning consumers if they fail to warn the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

7202. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

7203. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

7204. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that

were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

7205. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7206. The latent injuries from which Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7207. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7208. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7209. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7210. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7211. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7212. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 410:
Negligent Product Containers – Indiana

7213. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7214. This cause of action is brought by Rebecca Sizemore, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7215. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7216. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7217. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7218. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7219. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Indiana Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7220. The latent injuries from which Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7221. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7222. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7223. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7224. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7225. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7226. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 411:
Negligent Storage and Transportation – Indiana

7227. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7228. This cause of action is brought by Rebecca Sizemore, Tracy Wells, and Timberly Goble, individually and on behalf of the Indiana Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7229. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7230. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7231. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7232. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7233. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Indiana Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7234. The latent injuries from which Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals

exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7235. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7236. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7237. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7238. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7239. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Indiana Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7240. Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

6. Maryland

COUNT 412:
Negligence – Failure to Warn Through Proper Expiration Dates – Maryland

7241. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7242. This cause of action is brought by Alberta Griffin, individually and on behalf of the Maryland Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7243. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7244. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7245. Under Maryland law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of a danger it knew or should have had known about.

7246. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7247. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7248. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7249. The latent injuries from which Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7250. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7251. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7252. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7253. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7254. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Maryland Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7255. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 413:
Negligence – Failure to Warn Consumers Through the FDA – Maryland

7256. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7257. This cause of action is brought by Alberta Griffin, individually and on behalf of the Maryland Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7258. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7259. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

7260. Under Maryland law, a "failure to warn claim is parallel. Maryland tort law recognizes that a 'duty to warn can undergird a negligence case in ... a product liability action....' *Gourdine v. Crews*, 405 Md. 722, 955 A.2d 769, 779 (2008). Moreover, this duty to warn extends beyond the time of sale, and requires the manufacturer to make 'reasonable efforts' to convey an effective warning. *Owens–Illinois, Inc. v. Zenobia*, 325 Md. 420, 601 A.2d 633, 646 (1992). And reasonable efforts would, in some circumstances, entail a warning to a third party such as the FDA." *Williams v. Smith & Nephew, Inc.*, 123 F. Supp. 3d 733, 742 (D. Md. 2015).

7261. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

7262. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

7263. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather

than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

7264. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of to make reasonable efforts to ensure an effective warning reached consumers.

7265. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Maryland Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7266. The latent injuries from which Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7267. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7268. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7269. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7270. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7271. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7272. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 414:
Negligent Product Containers – Maryland

7273. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7274. This cause of action is brought by Alberta Griffin, individually and on behalf of the Maryland Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7275. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7276. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7277. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7278. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7279. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Maryland Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7280. The latent injuries from which Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7281. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7282. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7283. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7284. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7285. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7286. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 415:
Negligent Storage and Transportation – Maryland

7287. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7288. This cause of action is brought by Alberta Griffin, individually and on behalf of the Maryland Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7289. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7290. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7291. Under Maryland law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7292. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7293. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Maryland Teva Prescription Medical Monitoring Class members have sustained a significantly

increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7294. The latent injuries from which Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7295. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7296. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7297. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7298. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7299. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Maryland Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7300. Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Maryland Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

7. Missouri

COUNT 416:
Negligence – Failure to Warn Through Proper Expiration Dates – Missouri

7301. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription

Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7302. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7303. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7304. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7305. Under Missouri law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning of the risks of its products.

7306. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7307. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7308. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing

serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7309. The latent injuries from which Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7310. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7311. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7312. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7313. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7314. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7315. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 417:
Strict Products Liability – Failure to Warn Consumers Through the FDA – Missouri

7316. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury),

as if fully stated herein.

7317. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7318. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7319. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

7320. Missouri imposes a duty to warn the FDA under "a traditional state law tort cause of action; specifically, a strict liability failure to warn claim. *See* Mo. Rev. Stat. § 537.760. … [This duty] is instead grounded on a well-established duty imposed on manufacturers by Missouri state law to warn consumers about the risks of using their product, which Williams argues Bayer breached by failing to meet the post-premarket approval reporting requirements …." *Williams v. Bayer Corp.*, 541 S.W.3d 594, 606 (Mo. Ct. App. 2017).

7321. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

7322. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

7323. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

7324. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Manufacturer Defendants also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

7325. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Missouri Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7326. The latent injuries from which Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7327. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7328. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7329. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7330. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7331. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7332. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 418:
Negligent Product Containers – Missouri

7333. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7334. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7335. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7336. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7337. Under Missouri law, a manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7338. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7339. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Missouri Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7340. The latent injuries from which Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7341. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7342. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7343. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7344. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7345. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7346. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 419:
Negligent Storage and Transportation – Missouri

7347. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7348. This cause of action is brought by Antrenise Campbell, Brenda Newcomb, Cynthia Gibbs, and Elaine Aaron, individually and on behalf of the Missouri Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7349. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7350. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7351. Under Missouri law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7352. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7353. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Missouri Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7354. The latent injuries from which Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7355. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7356. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7357. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7358. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7359. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Missouri Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7360. Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Missouri Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

8. Ohio

COUNT 420:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

7361. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7362. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7363. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7364. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7365. Under Ohio law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

7366. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on each Ranitidine-Containing Product were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7367. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs

would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7368. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Ohio Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7369. The latent injuries from which Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7370. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7371. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7372. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7373. Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7374. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7375. Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 421:
Negligent Product Containers – Ohio

7376. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7377. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7378. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7379. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7380. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7381. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7382. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Ohio Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7383. The latent injuries from which Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7384. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7385. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7386. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7387. Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7388. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7389. Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 422:
Negligent Storage and Transportation – Ohio

7390. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7391. This cause of action is brought by Michael Galloway and Patricia Hess, individually and on behalf of the Ohio Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7392. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7393. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7394. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7395. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7396. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Ohio Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7397. The latent injuries from which Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7398. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7399. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7400. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7401. Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7402. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Ohio Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7403. Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

9. Pennsylvania

COUNT 423:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Pennsylvania

7404. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7405. This cause of action is brought by Felicia Ball and Joyce Guerrieri, individually and on behalf of the Pennsylvania Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7406. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7407. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7408. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7409. Under Pennsylvania law, a manufacturer, including Defendant, has a duty of reasonable care to provide an adequate warning.

7410. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7411. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7412. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7413. The latent injuries from which Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7414. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7415. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7416. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7417. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7418. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7419. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 424:
Medical Monitoring – Failure to Warn Consumers Through the FDA – Pennsylvania

7420. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7421. This cause of action is brought by Felicia Ball and Joyce Guerrieri, individually and on behalf of the Pennsylvania Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7422. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7423. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

7424. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7425. Pennsylvania law "may impose liability for the failure to report to the FDA. …the duty to warn is discharged by 'providing information about the product's dangerous propensities,' which undoubtedly encompasses Medtronic's alleged failures to report known problems, adverse events and malfunctions, and the comment does not require the third party to disclose the warnings, but rather be reasonably relied upon to do so." *Silver v. Medtronic, Inc.*, 236 F. Supp. 3d 889, 900 (M.D. Pa. 2017); *see also McLaughlin v. Bayer Corp.*, 172 F. Supp. 3d 804, 838 (E.D. Pa. 2016) ("we follow the reasoning of the en banc decision in *Stengel*"); *Bull v. St. Jude Med., Inc.*, No. CV 17-1141, 2018 WL 3397544, at *9 (E.D. Pa. July 12, 2018) ("Plaintiff has alleged that St. Jude violated state tort law, namely, by failing to warn physicians about the risks of the Riata ST Lead based on the failure to fully comply with its federal duty to report all adverse events to the FDA via MDRs in a timely manner.").

7426. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning the FDA would be effective in warning the end consumer or her doctor, manufacturers have a state law duty to do so.

7427. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

7428. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

7429. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

7430. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Pennsylvania Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7431. The latent injuries from which Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7432. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7433. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7434. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7435. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7436. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7437. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 425:
Medical Monitoring – Negligent Product Containers – Pennsylvania

7438. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7439. This cause of action is brought by Felicia Ball and Joyce Guerrieri, individually and on behalf of the Pennsylvania Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7440. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7441. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-

Specific Allegations) as to Defendant.

7442. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7443. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7444. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7445. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and Pennsylvania Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7446. The latent injuries from which Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7447. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7448. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7449. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7450. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7451. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7452. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the

Court, Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 426:
Medical Monitoring – Negligent Storage and Transportation – Pennsylvania

7453. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7454. This cause of action is brought by Felicia Ball and Joyce Guerrieri, individually and on behalf of the Pennsylvania Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7455. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7456. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7457. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7458. Under Pennsylvania law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7459. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7460. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and Pennsylvania Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7461. The latent injuries from which Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7462. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7463. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7464. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7465. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7466. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Pennsylvania Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7467. Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the

Court, Plaintiffs and the Pennsylvania Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

10. West Virginia

COUNT 427:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

7468. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7469. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7470. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7471. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

7472. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7473. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

7474. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7475. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7476. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and West Virginia Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7477. The latent injuries from which Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7478. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7479. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7480. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7481. Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7482. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7483. Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products.

Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 428:
Medical Monitoring – Negligent Product Containers – West Virginia

7484. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7485. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7486. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7487. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

7488. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7489. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

7490. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7491. As a direct and proximate result of this failure, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant sold, and therefore Plaintiffs and West Virginia Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7492. The latent injuries from which Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7493. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7494. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7495. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7496. Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7497. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7498. Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 429:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

7499. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 428-50 (describing Generic Prescription Manufacturers' failure to warn), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7500. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Teva Prescription Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Teva (for the purposes of this Count, "Defendant").

7501. The allegations in this Count apply to Teva during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7502. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

7503. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7504. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

7505. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

7506. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and West Virginia Teva Prescription Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7507. The latent injuries from which Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7508. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosis of the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7509. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7510. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7511. Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members as frequently and appropriately as necessary.

7512. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Teva Prescription Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7513. Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Teva Prescription Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

L. CAUSES OF ACTION AGAINST DEFENDANT CVS WITH RESPECT TO CVS HEALTH-BRANDED RANITIDINE

7514. Plaintiffs identified in the table below bring claims against Defendant CVS with respect to CVS Health-branded OTC ranitidine on behalf of themselves and their respective State CVS Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations

set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Richard Obrien	CA
Rebecca Sizemore	IN
Chris Troyan	OH
Patricia Hess	OH
Mynetta Hastings	WV

1. California

Count 430:
Negligence – Failure to Warn Through Proper Expiration Dates – California

7515. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7516. This cause of action is brought by Richard Obrien, individually and on behalf of the California CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7517. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7518. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to CVS.

7519. Under California law, Defendant had a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7520. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7521. Plaintiffs have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7522. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7523. The latent injuries from which Plaintiffs and the California CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7524. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7525. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7526. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7527. Plaintiffs and the California CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7528. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7529. Plaintiffs and the California CVS Medical Monitoring Class have an inadequate

remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 431:
Negligent Product Containers – California

7530. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7531. This cause of action is brought by Richard Obrien, individually and on behalf of the California CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7532. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7533. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to CVS.

7534. Under California law, Defendant had a duty to exercise reasonable care in choosing and making the containers for its products.

7535. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7536. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and California CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7537. The latent injuries from which Plaintiffs and the California CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7538. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7539. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7540. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California CVS

Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7541. Plaintiffs and the California CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7542. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7543. Plaintiffs and the California CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 432:
Negligent Storage and Transportation – California

7544. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91

(describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7545. This cause of action is brought by Richard Obrien, individually and on behalf of the California CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7546. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7547. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to CVS.

7548. Under California law, Defendant had a duty to exercise reasonable care in transporting and storing products.

7549. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7550. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and California CVS Medical Monitoring Class members have sustained a significantly increased risk

of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7551. The latent injuries from which Plaintiffs and the California CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7552. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7553. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7554. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7555. Plaintiffs and the California CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California CVS Medical Monitoring Class members as

frequently and appropriately as necessary.

7556. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7557. Plaintiffs and the California CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. Indiana

COUNT 433:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

7558. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7559. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7560. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7561. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to CVS.

7562. Under Indiana law, Defendant has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

7563. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7564. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7565. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Indiana CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7566. The latent injuries from which Plaintiffs and the Indiana CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7567. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7568. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7569. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7570. Plaintiffs and the Indiana CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7571. Accordingly, Defendant should be required to establish a medical monitoring

program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7572. Plaintiffs and the Indiana CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 434:
Negligent Product Containers – Indiana

7573. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7574. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7575. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7576. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to CVS.

7577. Under Indiana law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

7578. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7579. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Indiana CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7580. The latent injuries from which Plaintiffs and the Indiana CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7581. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7582. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7583. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7584. Plaintiffs and the Indiana CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7585. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7586. Plaintiffs and the Indiana CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-

approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 435:
Negligent Storage and Transportation – Indiana

7587. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7588. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7589. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7590. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to CVS.

7591. Under Indiana law, Defendant had a duty to exercise reasonable care in transporting and storing products.

7592. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7593. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Indiana CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7594. The latent injuries from which Plaintiffs and the Indiana CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7595. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7596. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7597. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without

adequate treatment will be significantly reduced.

7598. Plaintiffs and the Indiana CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7599. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7600. Plaintiffs and the Indiana CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Ohio

COUNT 436:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

7601. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91

(describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7602. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7603. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7604. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to CVS.

7605. Under Ohio law, Defendant has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

7606. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on its Ranitidine-Containing Products were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7607. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of Ranitidine-Containing Products, Plaintiffs and Ohio CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7608. The latent injuries from which Plaintiffs and the Ohio CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7609. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7610. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7611. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7612. Plaintiffs and the Ohio CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio CVS Medical Monitoring Class members for the Subject

Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7613. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7614. Plaintiffs and the Ohio CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 437:
Negligent Product Containers – Ohio

7615. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and

975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7616. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7617. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7618. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to CVS.

7619. Under Ohio law, Defendant had a duty to exercise reasonable care in choosing and making the containers for its products.

7620. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7621. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Ohio CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7622. The latent injuries from which Plaintiffs and the Ohio CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting

Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7623. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7624. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7625. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7626. Plaintiffs and the Ohio CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7627. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio CVS Medical Monitoring Class members in writing that they may require

frequent medical monitoring for the purpose of diagnosis.

7628. Plaintiffs and the Ohio CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 438:
Negligent Storage and Transportation – Ohio

7629. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7630. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7631. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7632. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to CVS.

7633. Under Ohio law, Defendant has a duty to exercise reasonable care in transporting and storing products.

7634. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7635. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, Plaintiffs and Ohio CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7636. The latent injuries from which Plaintiffs and the Ohio CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7637. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7638. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7639. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7640. Plaintiffs and the Ohio CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7641. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7642. Plaintiffs and the Ohio CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. West Virginia

COUNT 439:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

7643. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7644. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7645. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7646. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to CVS.

7647. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7648. Under West Virginia law, Defendant has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably

dangerous if distributed without a particular warning.

7649. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7650. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7651. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and West Virginia CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7652. The latent injuries from which Plaintiffs and the West Virginia CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7653. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7654. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7655. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7656. Plaintiffs and the West Virginia CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7657. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7658. Plaintiffs and the West Virginia CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia CVS Medical Monitoring Class members will continue to face an

unreasonable risk of injury and disability and remain undiagnosed.

COUNT 440:
Medical Monitoring – Negligent Product Containers – West Virginia

7659. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7660. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7661. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7662. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to CVS.

7663. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers.

7664. Under West Virginia law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

7665. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7666. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and West Virginia CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7667. The latent injuries from which Plaintiffs and the West Virginia CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7668. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7669. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7670. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7671. Plaintiffs and the West Virginia CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7672. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7673. Plaintiffs and the West Virginia CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 441:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

7674. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after

ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 451-55 (describing Store-Brand Defendants' failure to warn), 456-506 (describing CVS-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7675. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia CVS Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against CVS (for the purposes of this Count, "Defendant").

7676. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling CVS Health-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7677. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to CVS.

7678. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

7679. Under West Virginia law, Defendant has a duty to exercise reasonable care in transporting and storing products.

7680. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7681. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and West Virginia CVS Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer

economic losses and expenses associated with ongoing medical monitoring.

7682. The latent injuries from which Plaintiffs and the West Virginia CVS Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7683. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7684. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7685. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia CVS Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7686. Plaintiffs and the West Virginia CVS Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia CVS Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia CVS Medical Monitoring Class members as frequently and appropriately as necessary.

7687. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia CVS Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7688. Plaintiffs and the West Virginia CVS Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia CVS Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

M. CAUSES OF ACTION AGAINST DEFENDANT RITE AID WITH RESPECT TO RITE AID-BRANDED RANITIDINE

7689. Plaintiffs identified in the table below bring claims against Defendant CVS with respect to Rite Aid-branded OTC ranitidine on behalf of themselves and their respective State Rite Aid Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Golbenaz Bakhtiar	CA
Richard Obrien	CA

COUNT 442:
Negligence – Failure to Warn Through Proper Expiration Dates – California

7690. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 507-43 (describing Rite Aid-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7691. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Rite Aid (for the purposes of this Count, "Defendant").

7692. The allegations in this Count apply to Rite Aid during the time period in which it was manufacturing, shipping, storing, handling, and/or selling its Rite Aid-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated by reference.

7693. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Rite Aid.

7694. Under California law, Defendant had a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7695. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe

when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7696. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7697. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7698. The latent injuries from which Plaintiffs and the California Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7699. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7700. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7701. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7702. Plaintiffs and the California Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

7703. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7704. Plaintiffs and the California Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 443:
Negligent Product Containers – California

7705. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 507-43 (describing Rite Aid-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7706. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Rite Aid (for the purposes of this Count, "Defendant").

7707. The allegations in this Count apply to Rite Aid during the time period in which it was manufacturing, shipping, storing, handling, and/or selling its Rite Aid-branded Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

7708. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Rite Aid.

7709. Under California law, Defendant had a duty to exercise reasonable care in choosing and making the containers for its products.

7710. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7711. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and California Rite Aid

Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7712. The latent injuries from which Plaintiff and the California Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7713. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7714. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7715. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7716. Plaintiffs and the California Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the California Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

7717. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7718. Plaintiffs and the California Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 444:
Negligent Storage and Transportation – California

7719. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 507-43 (describing Rite Aid-specific allegations), and 975-85 (describing

Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7720. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Rite Aid (for the purposes of this Count, "Defendant").

7721. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Rite Aid-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7722. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Rite Aid.

7723. Under California law, Defendant had a duty to exercise reasonable care in transporting and storing products.

7724. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7725. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiff and California Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7726. The latent injuries from which Plaintiff and the California Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7727. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7728. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7729. By monitoring and testing Plaintiffs, the risk that Plaintiff and the California Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7730. Plaintiff and the California Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiff and the California Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiff and the California Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

7731. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Rite Aid Medical Monitoring Class members in writing that they may

require frequent medical monitoring for the purpose of diagnosis.

7732. Plaintiff and the California Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiff and the California Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

N. CAUSES OF ACTION AGAINST DEFENDANT WALGREENS WITH RESPECT TO WAL-ZAN-BRANDED RANITIDINE

7733. Plaintiffs identified in the table below bring claims against Defendant CVS with respect to Wal-Zan-branded OTC ranitidine on behalf of themselves and their respective State Walgreens Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiffs incorporates by reference the allegations specific to them from Section III.B. and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Golbenaz Bakhtiar	CA
Jonathan Ferguson	CA
Jeffrey Pisano	CO
Ronald Ragan	CO
Ronald Ragis	FL

1. Arizona

COUNT 445:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

7734. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91

(describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7735. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7736. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7737. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walgreens.

7738. Under Arizona law, Defendant has a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7739. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7740. Plaintiffs or their doctors would have read and heeded these warnings had they been

included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7741. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Arizona Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7742. The latent injuries from which Plaintiffs and the Arizona Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7743. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7744. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7745. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses

without adequate treatment will be significantly reduced.

7746. Plaintiffs and the Arizona Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7747. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7748. Plaintiffs and the Arizona Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 446:
Negligent Product Containers – Arizona

7749. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics),

185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7750. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7751. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

7752. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walgreens.

7753. Under Arizona law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

7754. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7755. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Arizona Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses

and expenses associated with ongoing medical monitoring.

7756. The latent injuries from which Plaintiffs and the Arizona Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7757. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7758. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7759. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7760. Plaintiffs and the Arizona Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7761. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7762. Plaintiffs and the Arizona Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 447:
Negligent Storage and Transportation – Arizona

7763. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7764. This cause of action is brought by Tangie Sims, individually and on behalf of the

Arizona Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7765. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7766. Plaintiffs also incorporates herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walgreens.

7767. Under Arizona law, Defendant has a duty to exercise reasonable care in transporting and storing products.

7768. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7769. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Arizona Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7770. The latent injuries from which Plaintiffs and the Arizona Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7771. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7772. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7773. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7774. Plaintiffs and the Arizona Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7775. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7776. Plaintiffs and the Arizona Walgreens Medical Monitoring Class have an inadequate

remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 448:
Negligence – Failure to Warn Through Proper Expiration Dates – California

7777. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7778. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7779. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7780. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-

Specific Allegations) as to Walgreens.

7781. Under California law, Defendant has a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7782. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7783. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7784. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7785. The latent injuries from which Plaintiffs and the California Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7786. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7787. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7788. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7789. Plaintiffs and the California Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7790. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7791. Plaintiffs and the California Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 449:
Negligent Product Containers – California

7792. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7793. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7794. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7795. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walgreens.

7796. Under California law, Defendant had a duty to exercise reasonable care in choosing

and making the containers for its products.

7797. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7798. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and California Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7799. The latent injuries from which Plaintiffs and the California Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7800. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7801. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7802. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses

without adequate treatment will be significantly reduced.

7803. Plaintiffs and the California Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7804. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7805. Plaintiffs and the California Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 450:
Negligent Storage and Transportation – California

7806. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics),

185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7807. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7808. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7809. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walgreens.

7810. Under California law, Defendant had a duty to exercise reasonable care in transporting and storing products.

7811. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7812. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and California Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer

economic losses and expenses associated with ongoing medical monitoring.

7813. The latent injuries from which Plaintiffs and the California Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7814. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7815. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7816. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7817. Plaintiffs and the California Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7818. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7819. Plaintiffs and the California Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffsand the California Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 451:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

7820. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7821. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7822. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7823. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walgreens.

7824. Plaintiff's exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers.

7825. Under Colorado law, Defendant has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

7826. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7827. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7828. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Colorado Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing

serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7829. The latent injuries from which Plaintiffs and the Colorado Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7830. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7831. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7832. By monitoring and testing Plaintiffs, the risk that Plaintiffs sand the Colorado Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7833. Plaintiffs and the Colorado Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Walgreens Medical

Monitoring Class members as frequently and appropriately as necessary.

7834. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7835. Plaintiffs and the Colorado Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 452:
Medical Monitoring – Negligent Product Containers – Colorado

7836. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7837. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7838. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7839. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walgreens.

7840. Plaintiff's exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers

7841. Under Colorado law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

7842. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7843. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Colorado Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7844. The latent injuries from which Plaintiffs and the Colorado Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7845. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7846. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7847. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7848. Plaintiffs and the Colorado Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7849. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Walgreens Medical Monitoring Class members in writing that they may

require frequent medical monitoring for the purpose of diagnosis.

7850. Plaintiffs and the Colorado Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 453:
Medical Monitoring – Negligent Storage and Transportation – Colorado

7851. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7852. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7853. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7854. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walgreens.

7855. Plaintiff's exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers.

7856. Under Colorado law, Defendant has a duty to exercise reasonable care in transporting and storing products.

7857. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7858. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7859. The latent injuries from which Plaintiffs and the Colorado Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7860. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

7861. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7862. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7863. Plaintiffs and the Colorado Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7864. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7865. Plaintiffs and the Colorado Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Colorado Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 454:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

7866. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7867. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7868. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7869. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walgreens.

7870. Plaintiff's exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers.

7871. Under Florida law, Defendant has the duty of reasonable care to provide an adequate warning of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7872. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7873. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7874. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Florida Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7875. The latent injuries from which Plaintiffs and the Florida Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7876. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7877. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7878. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7879. Plaintiffs and the Florida Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7880. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7881. Plaintiffs and the Florida Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term

physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

7882. Under Florida law, manufacturers, including Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

7883. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7884. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

COUNT 455:
Medical Monitoring – Negligent Product Containers – Florida

7885. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants'

failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7886. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Walgreens Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7887. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7888. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walgreens.

7889. Plaintiff's exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers.

7890. Under Florida law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

7891. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7892. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Florida Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7893. The latent injuries from which Plaintiffs and the Florida Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not

generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7894. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7895. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7896. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7897. Plaintiffs and the Florida Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7898. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7899. Plaintiffs and the Florida Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 456:
Medical Monitoring – Storage and Transportation – Florida

7900. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 544-86 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7901. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walgreens (for the purposes of this Count, "Defendant").

7902. The allegations in this Count apply to Defendant during the time period in which it

was manufacturing, shipping, storing, handling, and/or selling Wal-Zan-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7903. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walgreens.

7904. Plaintiff's exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers.

7905. Under Florida law, Defendant has a duty to exercise reasonable care in transporting and storing products.

7906. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7907. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Florida Walgreens Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7908. The latent injuries from which Plaintiffs and the Florida Walgreens Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7909. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7910. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7911. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Walgreens Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7912. Plaintiffs and the Florida Walgreens Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Walgreens Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Walgreens Medical Monitoring Class members as frequently and appropriately as necessary.

7913. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Walgreens Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7914. Plaintiffs and the Florida Walgreens Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term

physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Walgreens Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

O. CAUSES OF ACTION AGAINST DEFENDANT WALMART WITH RESPECT TO EQUATE-BRANDED RANITIDINE

7915. Plaintiffs identified in the table below bring claims against Defendant Walmart with respect to Equate-branded ranitidine on behalf of themselves and their respective State Walmart Prescription Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Jonathan Ferguson	CA
Jeffrey Pisano	CO
Ronald Ragan	CO
Michael Tomlinson	FL
Mynetta Hastings	WV

1. Arizona

COUNT 457:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

7916. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing

Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7917. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

7918. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7919. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walmart.

7920. Under Arizona law, Defendant has a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7921. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7922. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7923. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of Ranitidine-Containing Products, Plaintiffs and Arizona Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7924. The latent injuries from which Plaintiffs and the Arizona Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7925. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7926. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7927. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7928. Plaintiffs and the Arizona Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Walmart Medical Monitoring Class members

for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

7929. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7930. Plaintiffs and the Arizona Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 458:
Negligent Product Containers – Arizona

7931. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants'

failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7932. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

7933. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7934. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walmart.

7935. Under Arizona law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

7936. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7937. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Arizona Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7938. The latent injuries from which Plaintiffs and the Arizona Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7939. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7940. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7941. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7942. Plaintiffs and the Arizona Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

7943. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Walmart Medical Monitoring Class members in writing that they may require

frequent medical monitoring for the purpose of diagnosis.

7944. Plaintiffs and the Arizona Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 459:
Negligent Storage and Transportation – Arizona

7945. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7946. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

7947. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7948. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walmart.

7949. Under Arizona law, Defendant has a duty to exercise reasonable care in transporting and storing products.

7950. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7951. As a direct and proximate result of these systemic, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Arizona Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7952. The latent injuries from which Plaintiffs and the Arizona Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7953. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7954. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7955. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7956. Plaintiffs and the Arizona Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

7957. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7958. Plaintiffs and the Arizona Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 460:
Negligence – Failure to Warn Through Proper Expiration Dates – California

7959. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7960. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

7961. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7962. Plaintiffs incorporate herein by reference paragraphs Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walmart.

7963. Under California law, Defendant has a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

7964. Defendant breached this duty for its Ranitidine-Containing Products. The

expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

7965. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

7966. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and California Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7967. The latent injuries from which Plaintiffs and the California Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7968. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7969. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

7970. By monitoring and testing Plaintiffs, the risk that Plaintiff and the California Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7971. Plaintiffs and the California Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

7972. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7973. Plaintiffs and the California Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 461:
Negligent Product Containers – California

7974. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7975. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

7976. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7977. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walmart.

7978. Under California law, Defendant had a duty to exercise reasonable care in choosing and making the containers for its products.

7979. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

7980. As a direct and proximate result of this failure, excessive levels of NDMA built up

in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and California Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7981. The latent injuries from which Plaintiffs and the California Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7982. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7983. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7984. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7985. Plaintiffs and the California Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Walmart Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

7986. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

7987. Plaintiffs and the California Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 462:
Negligent Storage and Transportation – California

7988. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants'

failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

7989. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

7990. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

7991. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walmart.

7992. Under California law, Defendant had a duty to exercise reasonable care in transporting and storing products.

7993. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

7994. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

7995. The latent injuries from which Plaintiffs and the California Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals

exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

7996. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

7997. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

7998. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

7999. Plaintiffs and the California Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8000. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all California Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8001. Plaintiffs and the California Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 463:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

8002. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8003. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8004. The allegations in this Count apply to Defendant during the time period in which it

was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

8005. Plaintiffs incorporate herein by reference paragraphs Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walmart.

8006. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8007. Under Colorado law, Defendant has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

8008. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8009. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8010. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Colorado Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8011. The latent injuries from which Plaintiffs and the Colorado Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not

generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8012. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8013. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8014. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8015. Plaintiffs and the Colorado Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8016. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8017. Plaintiffs and the Colorado Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 464:
Medical Monitoring – Negligent Product Containers – Colorado

8018. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8019. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8020. The allegations in this Count apply to Defendant during the time period in which it

was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

8021. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walmart.

8022. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8023. Under Colorado law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

8024. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8025. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Colorado Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8026. The latent injuries from which Plaintiffs and the Colorado Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8027. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8028. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8029. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8030. Plaintiffs and the Colorado Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8031. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8032. Plaintiffs and the Colorado Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-

approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 465:
Medical Monitoring – Negligent Storage and Transportation – Colorado

8033. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8034. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8035. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

8036. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walmart.

8037. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8038. Under Colorado law, Defendant has a duty to exercise reasonable care in transporting and storing products.

8039. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

8040. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Colorado Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8041. The latent injuries from which Plaintiffs and the Colorado Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8042. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8043. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8044. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8045. Plaintiffs and the Colorado Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8046. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8047. Plaintiffs and the Colorado Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 466:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

8048. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8049. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8050. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

8051. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walmart.

8052. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8053. Under Florida law, Defendant has the duty of reasonable care to provide an adequate warning of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of

manufacture and distribution.

8054. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8055. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8056. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and Florida Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8057. The latent injuries from which Plaintiffs and the Florida Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8058. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8059. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8060. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8061. Plaintiffs and the Florida Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8062. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8063. Plaintiffs and the Florida Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Walmart Medical Monitoring Class members will continue to face an unreasonable

risk of injury and disability and remain undiagnosed.

COUNT 467:
Medical Monitoring – Negligent Product Containers – Florida

8064. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8065. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8066. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

8067. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walmart.

8068. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8069. Under Florida law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

8070. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8071. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Florida Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8072. The latent injuries from which Plaintiffs and the Florida Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8073. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8074. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8075. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8076. Plaintiffs and the Florida Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8077. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8078. Plaintiffs and the Florida Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 468:
Medical Monitoring – Negligent Storage and Transportation – Florida

8079. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after

ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8080. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8081. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

8082. Plaintiffs also incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walmart.

8083. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8084. Under Florida law, Defendant has a duty to exercise reasonable care in transporting and storing products.

8085. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

8086. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and Florida Walmart Medical Monitoring Class members have sustained a significantly increased risk

of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8087. The latent injuries from which Plaintiffs and the Florida Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8088. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8089. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8090. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8091. Plaintiffs and the Florida Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Walmart Medical Monitoring Class

members as frequently and appropriately as necessary.

8092. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8093. Plaintiffs and the Florida Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. West Virginia

COUNT 469:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

8094. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing

Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8095. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8096. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

8097. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Walmart.

8098. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8099. Under West Virginia law, Defendant has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

8100. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8101. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8102. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of Ranitidine-Containing Products, Plaintiffs and West Virginia Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8103. The latent injuries from which Plaintiffs and the West Virginia Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8104. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8105. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8106. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8107. Plaintiffs and the West Virginia Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Walmart Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8108. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8109. Plaintiffs and the West Virginia Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 470:
Medical Monitoring – Negligent Product Containers – West Virginia

8110. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants'

failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8111. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8112. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference..

8113. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Walmart.

8114. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing various types of serious and potentially fatal Subject Cancers.

8115. Under West Virginia law, Defendant has a duty to exercise reasonable care in choosing and making the containers for its products.

8116. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8117. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and West Virginia Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8118. The latent injuries from which Plaintiffs and the West Virginia Walmart Medical

Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8119. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8120. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8121. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8122. Plaintiffs and the West Virginia Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8123. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8124. Plaintiffs and the West Virginia Walmart Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 471:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

8125. Plaintiffs incorporate by reference each allegation set forth in paragraphs 78-91 (describing Store-Brand Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 451-55 (describing Store-Brand Defendants' failure to warn), 587-630 (describing Walgreens-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8126. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Walmart Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Walmart (for the purposes of this Count, "Defendant").

8127. The allegations in this Count apply to Defendant during the time period in which it was manufacturing, shipping, storing, handling, and/or selling Equate-branded Ranitidine-Containing Products, which is set forth in paragraphs 172-84 and incorporated herein by reference.

8128. Plaintiffs also incorporate herein by reference paragraphs Paragraphs 951-74 (Additional Count-Specific Allegations) as to Walmart.

8129. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8130. Under West Virginia law, Defendant has a duty to exercise reasonable care in transporting and storing products.

8131. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products remained free from excessive heat and humidity, as required both by the duty of reasonable care and the label.

8132. As a direct and proximate result of these systemic failures, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and West Virginia Walmart Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8133. The latent injuries from which Plaintiffs and the West Virginia Walmart Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8134. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8135. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8136. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Walmart Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8137. Plaintiffs and the West Virginia Walmart Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Walmart Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Walmart Medical Monitoring Class members as frequently and appropriately as necessary.

8138. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Walmart Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8139. Plaintiffs and the West Virginia Walmart Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Walmart Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

P. CAUSES OF ACTION AGAINST DEFENDANT APOTEX WITH RESPECT TO PRIVATE-LABEL PRODUCT RITE AID RANITIDINE

8140. Plaintiffs identified in the table below bring claims against Defendant Apotex with respect to private-label product Rite Aid ranitidine on behalf of themselves and their respective State Apotex Rite Aid Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Golbenaz Bakhtiar	CA
Richard Obrien	CA

COUNT 472:
Negligence – Failure to Warn Through Proper Expiration Dates – California

8141. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8142. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Apotex Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8143. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8144. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8145. Under California law, manufacturers, including Defendant have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

8146. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8147. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8148. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of Ranitidine-Containing Products, Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8149. The latent injuries from which Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8150. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8151. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8152. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8153. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

8154. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8155. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 473:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

8156. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8157. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Apotex Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8158. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8159. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

8160. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

8161. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

8162. The FDA was reasonably expected to disseminate this information. No speculation

is necessary on this point because the FDA in fact did warn consumers and the medical community when they learned of these risks.

8163. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

8164. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

8165. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class mhave sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8166. The latent injuries from which Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class msuffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8167. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8168. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8169. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8170. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

8171. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8172. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 474:
Negligent Product Containers – California

8173. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8174. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Apotex Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8175. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8176. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8177. Under California law, a pharmaceutical manufacturer, including Defendant, has a

duty to exercise reasonable care in choosing and making the containers for its products.

8178. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8179. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8180. The latent injuries from which Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8181. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8182. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8183. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and

losses without adequate treatment will be significantly reduced.

8184. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

8185. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8186. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 475:
Negligent Storage and Transportation – California

8187. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8188. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Apotex Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8189. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8190. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8191. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8192. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8193. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California

Apotex Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8194. The latent injuries from which Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8195. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8196. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8197. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8198. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

8199. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8200. Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

Q. CAUSES OF ACTION AGAINST DEFENDANT APOTEX WITH RESPECT TO PRIVATE-LABEL PRODUCT WAL-ZAN RANITIDINE

8201. Plaintiffs identified in the table below bring claims against Defendant Apotex with respect to private-label product Wal-Zan ranitidine on behalf of themselves and their respective State Apotex Wal-Zan Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ

Golbenaz Bakhtiar	CA
Jeffrey Pisano	CO
Ronald Ragan	CO
Ronald Ragis	FL

1. Arizona

COUNT 476:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

8202. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8203. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8204. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8205. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-

Specific Allegations) as to Defendant.

8206. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

8207. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8208. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8209. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8210. The latent injuries from which Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8211. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8212. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8213. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8214. Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8215. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8216. Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 477:
Negligent Product Containers – Arizona

8217. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8218. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8219. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8220. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-

Specific Allegations) as to Defendant.

8221. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8222. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8223. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8224. The latent injuries from which Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8225. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8226. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8227. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8228. Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8229. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8230. Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 478:
Negligent Storage and Transportation – Arizona

8231. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8232. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8233. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8234. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8235. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8236. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and

humidity.

8237. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8238. The latent injuries from which Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8239. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8240. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8241. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8242. Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8243. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8244. Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 479:
Negligence – Failure to Warn Through Proper Expiration Dates – California

8245. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8246. This cause of action is brought by Golbenaz Bakhtiar, individually and on behalf of the California Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8247. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8248. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8249. Under California law, manufacturers, including Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

8250. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8251. Plaintiffs or their doctors would have read and heeded these warnings had they been

included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8252. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8253. The latent injuries from which Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8254. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8255. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8256. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and

losses without adequate treatment will be significantly reduced.

8257. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8258. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8259. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 480:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

8260. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8261. This cause of action is brought by Golbenaz Bakhtiar, individually and on behalf of the California Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8262. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8263. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

8264. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

8265. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably

expected to pool and share safety-related information and publicize risks to the medical community.

8266. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

8267. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

8268. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

8269. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8270. The latent injuries from which Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally

recommended in the absence of exposure to this risk of harm.

8271. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8272. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8273. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8274. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8275. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8276. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 481:
Negligent Product Containers – California

8277. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8278. This cause of action is brought by Golbenaz Bakhtiar, individually and on behalf of the California Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8279. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8280. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8281. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8282. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8283. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8284. The latent injuries from which Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8285. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8286. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

8287. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8288. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8289. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8290. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 482:
Negligent Storage and Transportation – California

8291. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8292. This cause of action is brought by Golbenaz Bakhtiar, individually and on behalf of the California Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8293. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8294. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8295. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8296. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and

humidity.

8297. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8298. The latent injuries from which Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8299. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8300. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8301. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8302. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8303. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8304. Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 483:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

8305. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8306. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8307. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8308. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8309. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8310. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

8311. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8312. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8313. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8314. The latent injuries from which Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8315. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8316. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8317. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado

Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8318. Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8319. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8320. Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 484:
Medical Monitoring – Negligent Product Containers – Colorado

8321. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8322. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8323. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8324. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8325. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8326. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8327. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8328. As a direct and proximate result of this failure, excessive levels of NDMA built up

in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8329. The latent injuries from which Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8330. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8331. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8332. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8333. Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8334. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8335. Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 485:
Medical Monitoring – Negligent Storage and Transportation – Colorado

8336. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8337. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8338. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8339. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8340. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8341. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8342. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8343. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical

monitoring.

8344. The latent injuries from which Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8345. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8346. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8347. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8348. Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8349. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 486:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

8350. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of

ranitidine and injury), as if fully stated herein.

8351. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8352. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8353. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8354. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8355. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

8356. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8357. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8358. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8359. The latent injuries from which Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8360. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8361. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8362. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8363. Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8364. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8365. Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 487:
Medical Monitoring – Negligent Product Containers – Florida

8366. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8367. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8368. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8369. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8370. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8371. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8372. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8373. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8374. The latent injuries from which Plaintiffs and the Florida Apotex Wal-Zan Medical

Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8375. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8376. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8377. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8378. Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8379. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8380. Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 488:
Medical Monitoring – Negligent Storage and Transportation – Florida

8381. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8382. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"),

against Apotex (for the purposes of this Count, "Defendant").

8383. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8384. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8385. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8386. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8387. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8388. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8389. The latent injuries from which Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8390. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8391. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8392. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8393. Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8394. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Apotex Wal-Zan Medical Monitoring Class members in writing that they may

require frequent medical monitoring for the purpose of diagnosis.

8395. Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. West Virginia

COUNT 489:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

8396. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8397. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8398. The allegations in this Count apply to Apotex during the time period in which it

was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8399. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8400. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8401. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

8402. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8403. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8404. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8405. The latent injuries from which Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8406. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8407. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8408. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8409. Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8410. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8411. Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 490:
Medical Monitoring – Negligent Product Containers – West Virginia

8412. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8413. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8414. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8415. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8416. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8417. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8418. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8419. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8420. The latent injuries from which Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8421. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8422. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8423. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8424. Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8425. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8426. Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk

of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 491:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

8427. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8428. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Apotex Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8429. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8430. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8431. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8432. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8433. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8434. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8435. The latent injuries from which Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8436. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8437. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8438. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8439. Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8440. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Apotex Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8441. Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Apotex Wal-Zan Medical Monitoring Class members will

continue to face an unreasonable risk of injury and disability and remain undiagnosed.

R. CAUSES OF ACTION AGAINST DEFENDANT APOTEX WITH RESPECT TO PRIVATE-LABEL PRODUCT EQUATE RANITIDINE

8442. Plaintiffs identified in the table below bring claims against Defendant Apotex with respect to private-label product Equate ranitidine on behalf of themselves and their respective State Apotex Equate Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Jeffrey Pisano	CO
Ronald Ragan	CO
Michael Tomlinson	FL
Mynetta Hastings	WV

1. Arizona

COUNT 492:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

8443. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8444. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8445. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8446. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8447. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

8448. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8449. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8450. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Apotex

Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8451. The latent injuries from which Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8452. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8453. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8454. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8455. Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8456. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8457. Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 493:
Negligent Product Containers – Arizona

8458. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8459. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8460. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8461. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8462. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8463. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8464. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8465. The latent injuries from which Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8466. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8467. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8468. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8469. Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8470. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Apotex Equate Medical Monitoring Class members in writing that they may

require frequent medical monitoring for the purpose of diagnosis.

8471. Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 494:
Negligent Storage and Transportation – Arizona

8472. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8473. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8474. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in

paragraphs 172-84, which are incorporated by reference.

8475. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8476. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8477. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8478. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8479. The latent injuries from which Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8480. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

8481. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8482. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8483. Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8484. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8485. Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Arizona Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. Colorado

COUNT 495:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

8486. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8487. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8488. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8489. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8490. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased

their risk of developing serious and potentially fatal Subject Cancers.

8491. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

8492. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8493. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8494. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8495. The latent injuries from which Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8496. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8497. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8498. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8499. Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8500. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8501. Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 496:
Medical Monitoring – Negligent Product Containers – Colorado

8502. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8503. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8504. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8505. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8506. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8507. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8508. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8509. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8510. The latent injuries from which Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8511. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8512. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

8513. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8514. Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8515. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8516. Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 497:
Medical Monitoring – Negligent Storage and Transportation – Colorado

8517. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8518. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8519. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8520. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8521. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8522. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8523. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8524. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8525. The latent injuries from which Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8526. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8527. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8528. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado

Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8529. Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8530. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Florida

COUNT 498:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

8531. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8532. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8533. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8534. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8535. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8536. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

8537. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8538. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8539. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8540. The latent injuries from which Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8541. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8542. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8543. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8544. Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8545. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8546. Plaintiffs and the Florida Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 499:
Medical Monitoring – Negligent Product Containers – Florida

8547. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8548. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8549. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8550. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8551. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8552. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8553. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8554. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8555. The latent injuries from which Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8556. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8557. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8558. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8559. Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8560. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8561. Plaintiffs and the Florida Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 500:
Medical Monitoring – Negligent Storage and Transportation – Florida

8562. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8563. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8564. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8565. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8566. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8567. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8568. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8569. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and

transported, and therefore Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8570. The latent injuries from which Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8571. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8572. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8573. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8574. Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Apotex Equate Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8575. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8576. Plaintiffs and the Florida Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

6. West Virginia

COUNT 501:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

8577. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8578. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8579. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8580. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8581. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8582. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

8583. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8584. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the

use of the Ranitidine-Containing Products.

8585. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8586. The latent injuries from which Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8587. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8588. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8589. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8590. Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members

seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8591. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8592. Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 502:
Medical Monitoring – Negligent Product Containers – West Virginia

8593. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before

ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8594. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8595. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8596. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8597. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8598. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8599. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8600. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses

associated with ongoing medical monitoring.

8601. The latent injuries from which Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8602. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8603. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8604. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8605. Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8606. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8607. Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 503:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

8608. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 657-706 (describing Apotex-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8609. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Apotex Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Apotex (for the purposes of this Count, "Defendant").

8610. The allegations in this Count apply to Apotex during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8611. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8612. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8613. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8614. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8615. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8616. The latent injuries from which Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8617. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8618. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8619. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8620. Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members as frequently and appropriately as necessary.

8621. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Apotex Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8622. Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Apotex Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

S. CAUSES OF ACTION AGAINST DEFENDANT DR. REDDY'S WITH RESPECT TO PRIVATE-LABEL PRODUCT CVS HEALTH RANITIDINE

8623. Plaintiffs identified in the table below bring claims against Defendant Dr. Reddy's with respect to private-label product CVS Health ranitidine on behalf of themselves and their respective State Dr. Reddy's CVS Health Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section IV, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Richard Obrien	CA
Rebecca Sizemore	IN
Chris Troyan	OH
Patricia Hess	OH
Mynetta Hastings	WV

1. California

COUNT 504:
Negligence – Failure to Warn Through Proper Expiration Dates – California

8624. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8625. This cause of action is brought by Richard Obrien, individually and on behalf of the California Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8626. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8627. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8628. Under California law, manufacturers, including Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture

and distribution.

8629. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8630. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8631. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8632. The latent injuries from which Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8633. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8634. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8635. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8636. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8637. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8638. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or

established by the Court, Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 505:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

8639. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8640. This cause of action is brought by Richard Obrien, individually and on behalf of the California Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8641. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8642. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

8643. Under California law, manufacturers, including Defendant, bear "a duty to convey

warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

8644. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

8645. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

8646. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

8647. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

8648. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased

risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8649. The latent injuries from which Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8650. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8651. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8652. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8653. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California

Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8654. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8655. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 506:
Negligent Product Containers – California

8656. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8657. This cause of action is brought by Richard Obrien, individually and on behalf of the California Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8658. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8659. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8660. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8661. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8662. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8663. The latent injuries from which Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is

specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8664. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8665. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8666. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8667. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8668. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8669. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 507:
Negligent Storage and Transportation – California

8670. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8671. This cause of action is brought by Richard Obrien, individually and on behalf of the California Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count,

"Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8672. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8673. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8674. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8675. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8676. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore, Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8677. The latent injuries from which Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally

recommended in the absence of exposure to this risk of harm.

8678. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8679. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8680. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8681. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8682. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's CVS Health Medical Monitoring Class members in writing

that they may require frequent medical monitoring for the purpose of diagnosis.

8683. Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. Indiana

COUNT 508:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

8684. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8685. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8686. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8687. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8688. Under Indiana law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

8689. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8690. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8691. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8692. The latent injuries from which Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8693. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8694. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8695. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8696. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8697. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Indiana Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8698. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 509:
Negligence – Failure to Warn Consumers Through the FDA – Indiana

8699. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8700. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8701. The allegations in this Count apply to Dr. Reddy's during the time period in which

it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8702. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

8703. Indiana law allows a plaintiff to "state[] plausible claims for relief under state law based on an alleged failure to warn the FDA." *McAfee v. Medtronic, Inc.*, No. 1:12-CV-417 RLM, 2015 WL 3617755, at *5 (N.D. Ind. June 4, 2015), *on reconsideration*, No. 1:12-CV-417 RLM, 2016 WL 2588807 (N.D. Ind. May 5, 2016) (rejecting causation). Failures to warn are governed by negligence principles. Ind. Code Ann. § 34-20-2-2. ("[T]he party making the claim must establish that the manufacturer or seller failed to exercise reasonable care under the circumstances … in providing the warnings or instructions.")

8704. Defendant ultimately owed this duty to warn to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers "fail[] to exercise reasonable care under the circumstances," Ind. Code Ann. § 34-20-2-2, in warning consumers if they fail to warn the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

8705. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

8706. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

8707. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

8708. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8709. The latent injuries from which Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8710. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8711. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8712. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8713. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8714. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8715. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 510:
Negligent Product Containers – Indiana

8716. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8717. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8718. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8719. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8720. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8721. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8722. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Indiana Dr.

Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8723. The latent injuries from which Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8724. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8725. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8726. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8727. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8728. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8729. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 511:
Negligent Storage and Transportation – Indiana

8730. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8731. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8732. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8733. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8734. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8735. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8736. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8737. The latent injuries from which Plaintiffs and the Indiana Dr. Reddy's CVS Health

Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8738. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8739. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8740. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8741. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8742. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8743. Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Ohio

COUNT 512:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

8744. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8745. This cause of action is brought by Chris Troyan, and Patricia Hess, individually and

on behalf of the Ohio Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8746. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8747. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8748. Under Ohio law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

8749. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on each Ranitidine-Containing Product were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8750. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8751. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8752. The latent injuries from which Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8753. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8754. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8755. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8756. Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8757. Accordingly, Defendant should be required to establish a medical monitoring

program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8758. Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 513:
Negligent Product Containers – Ohio

8759. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8760. This cause of action is brought by Chris Troyan, and Patricia Hess, individually and

on behalf of the Ohio Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8761. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8762. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8763. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8764. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8765. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8766. The latent injuries from which Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8767. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8768. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8769. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8770. Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8771. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8772. Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 514:
Negligent Storage and Transportation – Ohio

8773. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8774. This cause of action is brought Chris Troyan, and Patricia Hess, individually and on behalf of the Ohio Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8775. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8776. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8777. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8778. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8779. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8780. The latent injuries from which Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8781. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8782. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

8783. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8784. Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8785. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8786. Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. West Virginia

COUNT 515:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

8787. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8788. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8789. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8790. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8791. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8792. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the

product would be unreasonably dangerous if distributed without a particular warning.

8793. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8794. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8795. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8796. The latent injuries from which Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8797. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8798. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8799. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8800. Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8801. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8802. Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or

established by the Court, Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 516:
Medical Monitoring – Negligent Product Containers – West Virginia

8803. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8804. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8805. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8806. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8807. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased

their risk of developing serious and potentially fatal Subject Cancers.

8808. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8809. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8810. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8811. The latent injuries from which Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8812. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8813. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8814. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8815. Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8816. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8817. Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 517:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

8818. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8819. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8820. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8821. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8822. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8823. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8824. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8825. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8826. The latent injuries from which Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8827. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8828. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8829. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia

Dr. Reddy's CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8830. Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

8831. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8832. Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Dr. Reddy's CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

T. CAUSES OF ACTION AGAINST DEFENDANT DR. REDDY'S WITH RESPECT TO PRIVATE-LABEL PRODUCT WAL-ZAN

8833. Plaintiffs identified in the table below bring claims against Defendant Dr. Reddy's with respect to private-label product Wal-Zan ranitidine on behalf of themselves and their respective State Dr. Reddy's Wal-Zan Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State**
Tangie Sims	AZ
Golbenaz Bakhtiar	CA
Jonathan Ferguson	CA
Jeffrey Pisano	CO
Ronald Ragan	CO
Ronald Ragis	FL

1. Arizona

COUNT 518:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

8834. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8835. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8836. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8837. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8838. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

8839. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8840. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8841. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Dr. Reddy's

Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8842. The latent injuries from which Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8843. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8844. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8845. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8846. Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8847. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8848. Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 519:
Negligent Product Containers – Arizona

8849. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8850. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8851. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8852. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8853. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8854. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8855. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8856. The latent injuries from which Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8857. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8858. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8859. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8860. Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8861. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that

they may require frequent medical monitoring for the purpose of diagnosis.

8862. Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 520:
Negligent Storage and Transportation – Arizona

8863. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8864. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8865. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in

paragraphs 172-84, which are incorporated by reference.

8866. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8867. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8868. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8869. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8870. The latent injuries from which Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8871. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

8872. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8873. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8874. Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8875. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8876. Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Arizona Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 521:
Negligence – Failure to Warn Through Proper Expiration Dates – California

8877. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8878. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8879. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8880. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8881. Under California law, manufacturers have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

8882. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8883. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8884. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8885. The latent injuries from which Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8886. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8887. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8888. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8889. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8890. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8891. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products.

Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 522:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

8892. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8893. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8894. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8895. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

8896. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

8897. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

8898. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

8899. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

8900. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

8901. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Dr.

Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8902. The latent injuries from which Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8903. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8904. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8905. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8906. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8907. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8908. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 523:
Negligent Product Containers – California

8909. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8910. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8911. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8912. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8913. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8914. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8915. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8916. The latent injuries from which Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8917. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8918. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8919. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8920. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8921. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all California Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8922. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 524:
Negligent Storage and Transportation – California

8923. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8924. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8925. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8926. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8927. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8928. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8929. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, which Plaintiffs consumed. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8930. The latent injuries from which Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8931. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8932. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8933. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8934. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8935. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8936. Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class have

an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 525:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

8937. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8938. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8939. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8940. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8941. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8942. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

8943. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8944. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8945. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8946. The latent injuries from which Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8947. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8948. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8949. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8950. Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8951. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that

they may require frequent medical monitoring for the purpose of diagnosis.

8952. Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 526:
Medical Monitoring – Negligent Product Containers – Colorado

8953. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8954. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8955. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in

paragraphs 172-84, which are incorporated by reference.

8956. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

8957. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8958. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

8959. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

8960. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8961. The latent injuries from which Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8962. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

8963. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8964. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8965. Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8966. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8967. Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the

Court, Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 527:
Medical Monitoring – Negligent Storage and Transportation – Colorado

8968. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8969. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8970. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8971. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

8972. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8973. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

8974. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

8975. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8976. The latent injuries from which Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8977. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

8978. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

8979. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8980. Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8981. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 528:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

8982. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8983. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

8984. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

8985. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

8986. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

8987. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light

of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

8988. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

8989. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

8990. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

8991. The latent injuries from which Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

8992. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

8993. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

8994. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

8995. Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

8996. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

8997. Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 529:
Medical Monitoring – Negligent Product Containers – Florida

8998. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

8999. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9000. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9001. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9002. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9003. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9004. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9005. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9006. The latent injuries from which Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9007. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9008. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9009. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Dr.

Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9010. Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9011. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9012. Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 530:
Medical Monitoring – Negligent Storage and Transportation – Florida

9013. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9014. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9015. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9016. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9017. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9018. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9019. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9020. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9021. The latent injuries from which Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9022. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9023. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9024. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9025. Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members

seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9026. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9027. Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Dr. Reddy's Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

U. CAUSES OF ACTION AGAINST DEFENDANT DR. REDDY'S WITH RESPECT TO PRIVATE-LABEL PRODUCT EQUATE RANITIDINE

9028. Plaintiffs identified in the table below bring claims against Defendant Dr. Reddy's with respect to private-label product Equate ranitidine on behalf of themselves and their respective State Dr. Reddy's Equate Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B

and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Jonathan Ferguson	CA
Jeffrey Pisano	CO
Ronald Ragan	CO
Michael Tomlinson	FL
Mynetta Hastings	WV

1. Arizona

COUNT 531:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

9029. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9030. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9031. The allegations in this Count apply to Dr. Reddy's during the time period in which

it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9032. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9033. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

9034. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9035. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9036. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9037. The latent injuries from which Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9038. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9039. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9040. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9041. Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9042. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Arizona Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9043. Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 532:
Negligent Product Containers – Arizona

9044. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9045. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9046. The allegations in this Count apply to Dr. Reddy's during the time period in which

it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9047. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9048. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9049. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9050. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9051. The latent injuries from which Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9052. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9053. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9054. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9055. Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9056. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9057. Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members will continue

to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 533:
Negligent Storage and Transportation – Arizona

9058. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9059. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9060. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9061. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9062. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9063. Defendant breached this duty by failing to implement or enforce policies to ensure

Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9064. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9065. The latent injuries from which Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9066. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9067. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9068. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and

losses without adequate treatment will be significantly reduced.

9069. Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9070. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9071. Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 534:
Negligence – Failure to Warn Through Proper Expiration Dates – California

9072. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9073. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9074. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9075. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9076. Under California law, manufacturers, including Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

9077. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9078. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9079. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9080. The latent injuries from which Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9081. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9082. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9083. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr.

Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9084. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9085. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9086. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 535:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

9087. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9088. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9089. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9090. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

9091. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

9092. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may

fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

9093. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

9094. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

9095. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

9096. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9097. The latent injuries from which Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9098. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9099. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9100. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9101. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9102. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's Equate Medical Monitoring Class members in writing that

they may require frequent medical monitoring for the purpose of diagnosis.

9103. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 536:
Negligent Product Containers – California

9104. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9105. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9106. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in

paragraphs 172-84, which are incorporated by reference.

9107. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9108. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9109. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9110. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9111. The latent injuries from which Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9112. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9113. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9114. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9115. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9116. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9117. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 537:
Negligent Storage and Transportation – California

9118. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9119. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9120. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9121. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9122. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9123. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and

humidity.

9124. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9125. The latent injuries from which Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9126. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9127. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9128. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9129. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9130. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9131. Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 538:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

9132. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9133. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9134. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9135. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9136. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9137. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

9138. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9139. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9140. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9141. The latent injuries from which Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9142. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9143. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9144. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Dr.

Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9145. Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9146. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9147. Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 539:
Medical Monitoring – Negligent Product Containers – Colorado

9148. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9149. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9150. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9151. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9152. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9153. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9154. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9155. As a direct and proximate result of this failure, excessive levels of NDMA built up

in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9156. The latent injuries from which Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9157. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9158. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9159. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9160. Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Dr. Reddy's Equate Medical

Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9161. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9162. Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 540:
Medical Monitoring – Negligent Storage and Transportation – Colorado

9163. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9164. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9165. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9166. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9167. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9168. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9169. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9170. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses

and expenses associated with ongoing medical monitoring.

9171. The latent injuries from which Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9172. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9173. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9174. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9175. Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9176. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 541:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

9177. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use

of ranitidine and injury), as if fully stated herein.

9178. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9179. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9180. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9181. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9182. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

9183. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9184. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9185. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9186. The latent injuries from which Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9187. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9188. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9189. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9190. Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9191. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9192. Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 542:
Medical Monitoring – Negligent Product Containers – Florida

9193. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9194. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9195. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9196. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9197. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9198. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9199. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9200. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9201. The latent injuries from which Plaintiffs and the Florida Dr. Reddy's Equate

Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9202. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9203. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9204. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9205. Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9206. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9207. Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 543:
Medical Monitoring – Negligent Storage and Transportation – Florida

9208. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9209. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count,

"Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9210. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9211. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9212. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9213. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9214. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9215. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9216. The latent injuries from which Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9217. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9218. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9219. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9220. Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9221. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Dr. Reddy's Equate Medical Monitoring Class members in writing that they

may require frequent medical monitoring for the purpose of diagnosis.

9222. Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. West Virginia

COUNT 544:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

9223. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9224. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9225. The allegations in this Count apply to Dr. Reddy's during the time period in which

it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9226. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9227. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9228. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

9229. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9230. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9231. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9232. The latent injuries from which Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9233. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9234. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9235. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9236. Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9237. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9238. Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 545:
Medical Monitoring – Negligent Product Containers – West Virginia

9239. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9240. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count,

"Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9241. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9242. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9243. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9244. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9245. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9246. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9247. The latent injuries from which Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9248. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9249. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9250. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9251. Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9252. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9253. Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class

have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 546:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

9254. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 707-44 (describing Dr. Reddy's-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9255. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Dr. Reddy's Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Dr. Reddy's (for the purposes of this Count, "Defendant").

9256. The allegations in this Count apply to Dr. Reddy's during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9257. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9258. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9259. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9260. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9261. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9262. The latent injuries from which Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9263. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9264. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9265. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9266. Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9267. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Dr. Reddy's Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9268. Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing

Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Dr. Reddy's Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

V. CAUSES OF ACTION AGAINST DEFENDANT PERRIGO WITH RESPECT TO PRIVATE-LABEL PRODUCT CVS HEALTH RANITIDINE

9269. Plaintiffs identified in the table below bring claims against Defendant Perrigo with respect to private-label product CVS Health ranitidine on behalf of themselves and their respective State Perrigo CVS Health Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra,* into their respective claims below.

Plaintiff Name	**State of Usage**
Richard Obrien	CA
Rebecca Sizemore	IN
Chris Troyan	OH
Patricia Hess	OH
Mynetta Hastings	WV

1. California

COUNT 547:
Negligence – Failure to Warn Through Proper Expiration Dates – California

9270. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before

ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9271. This cause of action is brought by Richard Obrien, individually and on behalf of the California Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9272. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9273. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9274. Under California law, manufacturers, including Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

9275. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9276. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the

use of the Ranitidine-Containing Products.

9277. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9278. The latent injuries from which Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9279. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9280. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9281. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9282. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class

members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9283. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9284. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 548:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

9285. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before

ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9286. This cause of action is brought by Richard Obrien, individually and on behalf of the California Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9287. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9288. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

9289. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

9290. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

9291. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

9292. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

9293. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

9294. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9295. The latent injuries from which Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9296. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9297. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9298. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9299. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9300. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9301. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk

of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 549:
Negligent Product Containers – California

9302. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9303. This cause of action is brought by Richard Obrien, individually and on behalf of the California Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9304. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9305. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9306. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9307. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9308. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9309. The latent injuries from which Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9310. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9311. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9312. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California

Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9313. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9314. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9315. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 550:
Negligent Storage and Transportation – California

9316. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9317. This cause of action is brought by Richard Obrien, individually and on behalf of the California Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9318. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9319. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9320. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9321. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9322. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and

transported, and therefore Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9323. The latent injuries from which Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9324. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9325. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9326. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9327. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo CVS Health Medical

Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9328. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9329. Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. Indiana

COUNT 551:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

9330. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9331. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9332. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9333. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9334. Under Indiana law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

9335. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9336. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9337. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9338. The latent injuries from which Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9339. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9340. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9341. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9342. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9343. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9344. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 552:
Negligence – Failure to Warn Consumers Through the FDA – Indiana

9345. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9346. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9347. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9348. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

9349. Indiana law allows a plaintiff to "state[] plausible claims for relief under state law based on an alleged failure to warn the FDA." *McAfee v. Medtronic, Inc.*, No. 1:12-CV-417 RLM, 2015 WL 3617755, at *5 (N.D. Ind. June 4, 2015), *on reconsideration*, No. 1:12-CV-417 RLM, 2016 WL 2588807 (N.D. Ind. May 5, 2016) (rejecting causation). Failures to warn are governed by negligence principles. Ind. Code Ann. § 34-20-2-2. ("[T]he party making the claim must establish that the manufacturer or seller failed to exercise reasonable care under the circumstances … in providing the warnings or instructions.")

9350. Defendant ultimately owed this duty to warn to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers "fail[] to exercise reasonable care under the circumstances," Ind. Code Ann. § 34-20-2-2, in warning consumers if they fail to warn the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

9351. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

9352. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

9353. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

9354. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9355. The latent injuries from which Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9356. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9357. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9358. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9359. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9360. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9361. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 553:
Negligent Product Containers – Indiana

9362. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9363. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9364. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9365. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-

Specific Allegations) as to Defendant.

9366. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9367. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9368. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9369. The latent injuries from which Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9370. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9371. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9372. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9373. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9374. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9375. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 554:
Negligent Storage and Transportation – Indiana

9376. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9377. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9378. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9379. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9380. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9381. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9382. As a direct and proximate result of these systematic failures, excessive levels of

NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9383. The latent injuries from which Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9384. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9385. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9386. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9387. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9388. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9389. Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Ohio

COUNT 555:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

9390. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before

ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9391. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9392. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9393. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9394. Under Ohio law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

9395. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on each Ranitidine-Containing Product were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9396. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the

use of the Ranitidine-Containing Products.

9397. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9398. The latent injuries from which Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9399. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9400. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9401. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9402. Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members

seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9403. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9404. Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 556:
Negligent Product Containers – Ohio

9405. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before

ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9406. This cause of action is brought by Chris Troyan and Patricia Hess,individually and on behalf of the Ohio Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9407. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9408. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9409. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9410. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9411. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9412. The latent injuries from which Plaintiffs and the Ohio Perrigo CVS Health Medical

Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9413. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9414. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9415. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9416. Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9417. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9418. Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 557:
Negligent Storage and Transportation – Ohio

9419. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9420. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio Perrigo CVS Health Medical Monitoring Class (for the purposes of this

Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9421. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9422. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9423. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9424. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9425. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9426. The latent injuries from which Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9427. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9428. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9429. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9430. Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9431. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9432. Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. West Virginia

COUNT 558:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

9433. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9434. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9435. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9436. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9437. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9438. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

9439. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9440. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9441. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9442. The latent injuries from which Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers

because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9443. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9444. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9445. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9446. Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9447. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Perrigo CVS Health Medical Monitoring Class members in writing

that they may require frequent medical monitoring for the purpose of diagnosis.

9448. Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 559:
Medical Monitoring – Negligent Product Containers – West Virginia

9449. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9450. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9451. The allegations in this Count apply to Perrigo during the time period in which it

was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9452. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9453. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9454. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9455. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9456. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9457. The latent injuries from which Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9458. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9459. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9460. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9461. Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9462. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9463. Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing

Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 560:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

9464. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9465. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Perrigo CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9466. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9467. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9468. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9469. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9470. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9471. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9472. The latent injuries from which Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9473. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9474. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9475. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9476. Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9477. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Perrigo CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9478. Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Perrigo CVS Health Medical Monitoring

Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

W. CAUSES OF ACTION AGAINST DEFENDANT PERRIGO WITH RESPECT TO PRIVATE-LABEL PRODUCT RITE AID RANITIDINE

9479. Plaintiffs identified in the table below bring claims against Defendant Perrigo with respect to private-label product Rite Aid ranitidine on behalf of themselves and their respective State Perrigo Rite Aid Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State**
Golbenaz Bakhtiar	CA
Richard Obrien	CA

COUNT 561:
Negligence – Failure to Warn Through Proper Expiration Dates – California

9480. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9481. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Perrigo Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9482. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9483. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9484. Under California law, manufacturers, including Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

9485. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9486. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9487. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer

economic losses and expenses associated with ongoing medical monitoring.

9488. The latent injuries from which Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9489. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9490. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9491. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9492. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

9493. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9494. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 562:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

9495. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of

ranitidine and injury), as if fully stated herein.

9496. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Perrigo Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9497. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9498. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

9499. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

9500. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

9501. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

9502. Because federal law requires generic drug labels to largely match branded drug

labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

9503. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

9504. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9505. The latent injuries from which Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9506. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9507. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9508. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9509. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

9510. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9511. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 563:
Negligent Product Containers – California

9512. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9513. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Perrigo Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9514. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9515. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9516. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9517. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9518. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9519. The latent injuries from which Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9520. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9521. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9522. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9523. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

9524. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9525. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 564:
Negligent Storage and **Transportation** – **California**

9526. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9527. This cause of action is brought by Golbenaz Bakhtiar and Richard Obrien, individually and on behalf of the California Perrigo Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9528. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9529. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9530. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9531. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9532. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9533. The latent injuries from whiyou mch Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9534. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9535. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9536. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9537. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

9538. Accordingly, Defendant should be required to establish a medical monitoring

program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9539. Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

X. CAUSES OF ACTION AGAINST DEFENDANT PERRIGO WITH RESPECT TO PRIVATE-LABEL PRODUCT WAL-ZAN RANITIDINE

9540. Plaintiffs identified in the table below bring claims against Defendant Perrigo with respect to private-label product Wal-Zan ranitidine on behalf of themselves and their respective State Perrigo Wal-Zan Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Golbenaz Bakhtiar	CA
Jonathan Ferguson	CA
Jeffrey Pisano	CO
Ronald Ragan	CO

Ronald Ragis	FL

1. Arizona

COUNT 565:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

9541. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9542. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9543. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9544. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9545. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light

of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

9546. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9547. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9548. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9549. The latent injuries from which Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9550. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

9551. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9552. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9553. Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9554. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9555. Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 566:
Negligent Product Containers – Arizona

9556. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9557. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9558. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9559. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9560. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9561. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9562. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9563. The latent injuries from which Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9564. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9565. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9566. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9567. Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9568. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9569. Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 567:
Negligent Storage and Transportation – Arizona

9570. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9571. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9572. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9573. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9574. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9575. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9576. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal

Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9577. The latent injuries from which Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9578. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9579. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9580. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9581. Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Perrigo Wal-Zan Medical

Monitoring Class members as frequently and appropriately as necessary.

9582. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9583. Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 568:
Negligence – Failure to Warn Through Proper Expiration Dates – California

9584. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9585. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9586. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9587. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9588. Under California law, manufacturers, like Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

9589. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9590. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9591. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo

Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9592. The latent injuries from which Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9593. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9594. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9595. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9596. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9597. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9598. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 569:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

9599. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9600. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9601. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9602. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

9603. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

9604. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

9605. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

9606. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

9607. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

9608. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9609. The latent injuries from which Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9610. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9611. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9612. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9613. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9614. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9615. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will continue to

face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 570:
Negligent Product Containers – California

9616. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9617. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9618. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9619. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9620. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9621. Defendant breached this duty by failing to utilize containers that would minimize

the NDMA produced in its Ranitidine-Containing Products.

9622. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9623. The latent injuries from which Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9624. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9625. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9626. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9627. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members

seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9628. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9629. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 571:
Negligent Storage and Transportation – California

9630. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before

ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9631. This cause of action is brought by Golbenaz Bakhtiar and Jonathan Ferguson, individually and on behalf of the California Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9632. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9633. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9634. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9635. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9636. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with

ongoing medical monitoring.

9637. The latent injuries from which Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9638. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9639. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9640. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9641. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9642. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9643. Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 572:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

9644. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of

ranitidine and injury), as if fully stated herein.

9645. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9646. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9647. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9648. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9649. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

9650. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9651. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9652. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Perrigo

Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9653. The latent injuries from which Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9654. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9655. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9656. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9657. Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9658. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9659. Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 573:
Medical Monitoring – Negligent Product Containers – Colorado

9660. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9661. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9662. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9663. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9664. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9665. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9666. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9667. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9668. The latent injuries from which Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9669. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9670. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9671. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9672. Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9673. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9674. Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 574:
Medical Monitoring – Negligent Storage and Transportation – Colorado

9675. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9676. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9677. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9678. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9679. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9680. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9681. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9682. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9683. The latent injuries from which Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally

recommended in the absence of exposure to this risk of harm.

9684. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9685. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9686. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9687. Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9688. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 575:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

9689. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9690. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9691. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in

paragraphs 172-84, which are incorporated by reference.

9692. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9693. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9694. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

9695. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9696. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9697. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9698. The latent injuries from which Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not

generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9699. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9700. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9701. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9702. Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9703. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9704. Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 576:
Medical Monitoring – Negligent Product Containers – Florida

9705. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9706. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9707. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9708. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9709. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9710. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9711. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9712. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9713. The latent injuries from which Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9714. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9715. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9716. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9717. Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9718. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9719. Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 577:
Medical Monitoring – Negligent Storage and Transportation – Florida

9720. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9721. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Perrigo Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9722. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9723. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9724. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9725. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9726. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9727. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9728. The latent injuries from which Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9729. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9730. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9731. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9732. Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

9733. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Perrigo Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9734. Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Perrigo Wal-Zan Medical Monitoring Class members will continue to

face an unreasonable risk of injury and disability and remain undiagnosed.

Y. CAUSES OF ACTION AGAINST DEFENDANT PERRIGO WITH RESPECT TO PRIVATE-LABEL PRODUCT EQUATE RANITIDINE

9735. Plaintiffs identified in the table below bring claims against Defendant Perrigo with respect to private-label product Equate ranitidine on behalf of themselves and their respective State Perrigo Equate Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Jonathan Ferguson	CA
Jeffrey Pisano	CO
Ronald Ragan	CO
Michael Tomlinson	FL
Mynetta Hastings	WV

1. Arizona

COUNT 578:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

9736. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9737. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9738. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9739. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9740. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

9741. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9742. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9743. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9744. The latent injuries from which Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9745. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9746. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9747. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9748. Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9749. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9750. Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 579:
Negligent Product Containers – Arizona

9751. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9752. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9753. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9754. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9755. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9756. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9757. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9758. The latent injuries from which Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals

exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9759. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9760. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9761. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9762. Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9763. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all Arizona Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9764. Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 580:
Negligent Storage and Transportation – Arizona

9765. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9766. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9767. The allegations in this Count apply to Perrigo during the time period in which it

was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9768. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9769. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9770. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9771. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9772. The latent injuries from which Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9773. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9774. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9775. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9776. Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9777. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9778. Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 581:
Negligence – Failure to Warn Through Proper Expiration Dates – California

9779. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9780. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9781. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9782. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9783. Under California law, manufacturers, including Defendant, have a duty of reasonable care to warn of particular risks that are known or knowable in light of the generally recognized and prevailing scientific and medical knowledge available at the time of manufacture and distribution.

9784. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9785. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9786. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9787. The latent injuries from which Plaintiffs and the California Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9788. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9789. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9790. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9791. Plaintiffs and the California Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9792. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9793. Plaintiffs and the California Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 582:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

9794. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9795. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9796. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9797. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

9798. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

9799. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

9800. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

9801. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

9802. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

9803. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Perrigo

Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9804. The latent injuries from which Plaintiffs and the California Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9805. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9806. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9807. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9808. Plaintiffs and the California Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for

the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9809. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9810. Plaintiffs and the California Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 583:
Negligent Product Containers – California

9811. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9812. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9813. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9814. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9815. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9816. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9817. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9818. The latent injuries from which Plaintiffs and the California Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9819. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9820. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9821. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9822. Plaintiffs and the California Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9823. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Equate Medical Monitoring Class members in writing that they

may require frequent medical monitoring for the purpose of diagnosis.

9824. Plaintiffs and the California Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 584:
Negligent Storage and Transportation – California

9825. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9826. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9827. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in

paragraphs 172-84, which are incorporated by reference.

9828. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9829. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9830. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9831. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9832. The latent injuries from which Plaintiffs and the California Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9833. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

9834. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9835. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9836. Plaintiffs and the California Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9837. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9838. Plaintiffs and the California Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the California Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. Colorado

COUNT 585:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

9839. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9840. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9841. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9842. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9843. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased

their risk of developing serious and potentially fatal Subject Cancers.

9844. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

9845. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9846. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9847. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9848. The latent injuries from which Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9849. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9850. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9851. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9852. Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9853. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9854. Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 586:
Medical Monitoring – Negligent Product Containers – Colorado

9855. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9856. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9857. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9858. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9859. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9860. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9861. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9862. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9863. The latent injuries from which Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9864. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9865. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

9866. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9867. Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9868. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9869. Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 587:
Medical Monitoring – Negligent Storage and Transportation – Colorado

9870. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9871. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9872. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9873. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9874. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9875. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9876. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9877. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9878. The latent injuries from which Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9879. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9880. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9881. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado

Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9882. Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9883. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

6. Florida

COUNT 588:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

9884. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9885. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9886. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9887. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9888. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9889. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

9890. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9891. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9892. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9893. The latent injuries from which Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9894. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9895. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9896. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9897. Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9898. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9899. Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 589:
Medical Monitoring – Negligent Product Containers – Florida

9900. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9901. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9902. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9903. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9904. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9905. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9906. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9907. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9908. The latent injuries from which Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9909. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9910. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9911. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9912. Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9913. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9914. Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 590:
Medical Monitoring – Negligent Storage and Transportation – Florida

9915. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9916. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9917. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9918. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9919. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9920. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9921. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9922. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products Defendant manufactured, stored, and

transported, and therefore Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9923. The latent injuries from which Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9924. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9925. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9926. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9927. Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9928. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9929. Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

7. West Virginia

COUNT 591:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

9930. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9931. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9932. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9933. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

9934. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9935. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

9936. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9937. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the

use of the Ranitidine-Containing Products.

9938. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9939. The latent injuries from which Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9940. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9941. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9942. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9943. Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members

seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9944. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9945. Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 592:
Medical Monitoring – Negligent Product Containers – West Virginia

9946. Plaintiffs incorporate by reference each allegation set forth in paragraphs 41–153 (describing Generic Manufacturer Defendants), 432–37 (describing the regulatory framework for generics), 322–42 (describing the recall of ranitidine), 385–97 (describing the breakdown of ranitidine before ingestion), 405–08 (describing Defendant's knowledge), 409–31 (describing the

regulatory framework for drug manufacturers), and 455–66 (describing Plaintiffs' use of ranitidine and injury) as if fully stated herein.

9947. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9948. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9949. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9950. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

9951. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9952. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

9953. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

9954. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9955. The latent injuries from which Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9956. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9957. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9958. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9959. Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9960. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9961. Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 593:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

9962. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 745-95 (describing Perrigo-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9963. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Perrigo Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Perrigo (for the purposes of this Count, "Defendant").

9964. The allegations in this Count apply to Perrigo during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9965. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

9966. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

9967. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

9968. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

9969. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic

Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9970. The latent injuries from which Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9971. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9972. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9973. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9974. Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring

Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members as frequently and appropriately as necessary.

9975. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Perrigo Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9976. Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Perrigo Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

Z. CAUSES OF ACTION AGAINST DEFENDANT STRIDES WITH RESPECT TO PRIVATE-LABEL PRODUCT CVS HEALTH RANITIDINE

9977. Plaintiffs identified in the table below bring claims against Defendant Strides with respect to private-label product CVS Health ranitidine on behalf of themselves and their respective State Strides CVS Health Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra,* into their respective claims below.

Plaintiff Name	**State of Usage**

Richard Obrien	CA
Rebecca Sizemore	IN
Chris Troyan	OH
Patricia Hess	OH
Mynetta Hastings	WV

1. California

COUNT 594:
Negligence – Failure to Warn Through Proper Expiration Dates – California

9978. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9979. This cause of action is brought by Richard Obrien, individually and on behalf of the California Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

9980. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9981. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-

Specific Allegations) as to Defendant.

9982. Under California law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

9983. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

9984. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

9985. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

9986. The latent injuries from which Plaintiffs and the California Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

9987. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

9988. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

9989. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

9990. Plaintiffs and the California Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

9991. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

9992. Plaintiffs and the California Strides CVS Health Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT _595:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

9993. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

9994. This cause of action is brought by Richard Obrien, individually and on behalf of the California Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

9995. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

9996. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-

Specific Allegations) as to Defendant.

9997. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

9998. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

9999. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

10000. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

10001. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

10002. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10003. The latent injuries from which Plaintiffs and the California Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10004. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10005. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10006. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10007. Plaintiffs and the California Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides CVS Health Medical

Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10008. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10009. Plaintiffs and the California Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 596:
Negligent Product Containers – California

10010. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10011. This cause of action is brought by Richard Obrien, individually and on behalf of the California Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10012. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10013. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10014. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10015. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10016. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10017. The latent injuries from which Plaintiffs and the California Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for

individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10018. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10019. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10020. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10021. Plaintiffs and the California Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10022. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b)

notifying all California Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10023. Plaintiffs and the California Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 597:
Negligent Storage and Transportation – California

10024. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10025. This cause of action is brought by Richard Obrien, individually and on behalf of the California Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10026. The allegations in this Count apply to Strides during the time period in which it was

manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10027. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10028. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10029. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10030. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10031. The latent injuries from which Plaintiffs and the California Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10032. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10033. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10034. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10035. Plaintiffs and the California Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10036. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10037. Plaintiffs and the California Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. Indiana

COUNT 598:
Negligence – Failure to Warn Through Proper Expiration Dates – Indiana

10038. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10039. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10040. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10041. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10042. Under Indiana law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate instructions for safe use and a warning as to dangers inherent in improper use.

10043. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10044. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10045. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10046. The latent injuries from which Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10047. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10048. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10049. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10050. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10051. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10052. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 599:
Negligence – Failure to Warn Consumers Through the FDA – Indiana

10053. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10054. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10055. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10056. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

10057. Indiana law allows a plaintiff to "state[] plausible claims for relief under state law

based on an alleged failure to warn the FDA." *McAfee v. Medtronic, Inc.*, No. 1:12-CV-417 RLM, 2015 WL 3617755, at *5 (N.D. Ind. June 4, 2015), *on reconsideration*, No. 1:12-CV-417 RLM, 2016 WL 2588807 (N.D. Ind. May 5, 2016) (rejecting causation). Failures to warn are governed by negligence principles. Ind. Code Ann. § 34-20-2-2. ("[T]he party making the claim must establish that the manufacturer or seller failed to exercise reasonable care under the circumstances … in providing the warnings or instructions.")

10058. Defendant ultimately owed this duty to warn to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers "fail[] to exercise reasonable care under the circumstances," Ind. Code Ann. § 34-20-2-2, in warning consumers if they fail to warn the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

10059. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

10060. Because federal law requires generic drug labels to largely match branded drug labels, Defendant was not able to warn consumers directly of the cancer risks of ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Generic Manufacturer Defendants failed to warn anyone through any medium.

10061. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting. This failure breached their duty of reasonable care.

10062. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10063. The latent injuries from which Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10064. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10065. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10066. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10067. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10068. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10069. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 600:
Negligent Product Containers – Indiana

10070. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10071. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10072. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10073. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10074. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10075. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10076. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10077. The latent injuries from which Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment)

that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10078. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10079. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10080. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10081. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10082. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing

Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10083. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 601:
Negligent Storage and Transportation – Indiana

10084. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10085. This cause of action is brought by Rebecca Sizemore, individually and on behalf of the Indiana Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10086. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10087. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10088. Under Indiana law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10089. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10090. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10091. The latent injuries from which Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10092. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10093. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10094. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10095. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10096. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Indiana Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10097. Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Indiana Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. **Ohio**

COUNT 602:
Strict Products Liability – Failure to Warn Through Proper Expiration Dates – Ohio

10098. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10099. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10100. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10101. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-

Specific Allegations) as to Defendant.

10102. Under Ohio law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks associated with its product that it knows or should have known about, and a duty to provide adequate post-marketing warnings or instructions.

10103. Defendant breached this duty for its Ranitidine-Containing Products. The warnings included on each Ranitidine-Containing Product were inadequate because The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10104. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10105. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10106. The latent injuries from which Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10107. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10108. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10109. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10110. Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10111. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10112. Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 603:
Negligent Product Containers – Ohio

10113. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10114. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10115. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10116. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-

Specific Allegations) as to Defendant.

10117. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10118. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10119. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10120. The latent injuries from which Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10121. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10122. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10123. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10124. Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10125. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10126. Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 604:
Negligent Storage and Transportation – Ohio

10127. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10128. This cause of action is brought by Chris Troyan and Patricia Hess, individually and on behalf of the Ohio Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10129. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10130. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10131. Under Ohio law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10132. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10133. As a direct and proximate result of these systematic failures, excessive levels of

NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and thefore Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10134. The latent injuries from which Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10135. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10136. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10137. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10138. Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10139. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Ohio Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10140. Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Ohio Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. **West Virginia**

COUNT 605:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

10141. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before

ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10142. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10143. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10144. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10145. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10146. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

10147. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10148. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs

would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10149. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10150. The latent injuries from which Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10151. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10152. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10153. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10154. Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10155. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10156. Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 606:
Medical Monitoring – Negligent Product Containers – West Virginia

10157. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10158. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10159. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10160. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10161. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10162. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10163. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10164. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia

Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10165. The latent injuries from which Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10166. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10167. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10168. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10169. Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust

fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10170. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10171. Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 607:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

10172. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10173. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides CVS Health Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10174. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10175. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10176. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10177. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10178. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10179. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer

economic losses and expenses associated with ongoing medical monitoring.

10180. The latent injuries from which Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10181. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10182. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10183. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10184. Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members as frequently and appropriately as necessary.

10185. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides CVS Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10186. Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides CVS Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

AA. CAUSES OF ACTION AGAINST DEFENDANT STRIDES WITH RESPECT TO PRIVATE-LABEL PRODUCT RITE AID RANITIDINE

10187. Plaintiffs identified in the table below bring claims against Defendant Strides with respect to private-label product Rite Aid ranitidine on behalf of themselves and their respective State Strides Rite Aid Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Golbenaz Bakhtiar	CA
Richard Obrien	CA

COUNT 608:
Negligence – Failure to Warn Through Proper Expiration Dates – California

10188. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10189. This cause of action is brought by Golbenaz Bakhitar and Richard Obrien, individually and on behalf of the California Strides Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10190. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10191. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10192. Under California law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

10193. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10194. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10195. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10196. The latent injuries from which Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10197. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10198. The available monitoring regime is reasonably necessary according to

contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10199. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10200. Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

10201. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10202. Plaintiffs and the California Strides Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 609:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

10203. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10204. This cause of action is brought by Golbenaz Bakhitar and Richard Obrien, individually and on behalf of the California Strides Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10205. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10206. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

10207. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413,

429, *as modified* (Feb. 3, 2014).

10208. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

10209. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

10210. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

10211. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

10212. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10213. The latent injuries from which Plaintiffs and the California Strides Rite Aid

Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10214. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10215. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10216. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10217. Plaintiffs and the California Strides Rite Aid Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Rite Aid Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Rite Aid Health Medical Monitoring Class members as frequently and appropriately as necessary.

10218. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Rite Aid Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10219. Plaintiffs and the California Strides Rite Aid Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Rite Aid Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 610:
Negligent Product Containers – California

10220. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10221. This cause of action is brought by Golbenaz Bakhitar and Richard Obrien, individually and on behalf of the California Strides Rite Aid Medical Monitoring Class (for the

purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10222. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10223. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10224. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10225. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10226. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10227. The latent injuries from which Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10228. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10229. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10230. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10231. Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

10232. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10233. Plaintiffs and the California Strides Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 611:
Negligent Storage and Transportation – California

10234. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10235. This cause of action is brought by Golbenaz Bakhitar and Richard Obrien, individually and on behalf of the California Strides Rite Aid Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10236. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10237. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10238. Under California law, a pharmaceutical manufacturer, including Defendant, has a

duty to exercise reasonable care in transporting and storing products.

10239. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10240. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10241. The latent injuries from which Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10242. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10243. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10244. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10245. Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members as frequently and appropriately as necessary.

10246. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Rite Aid Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10247. Plaintiffs and the California Strides Rite Aid Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Rite Aid Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

BB. CAUSES OF ACTION AGAINST DEFENDANT STRIDES WITH RESPECT TO PRIVATE-LABEL PRODUCT WAL-ZAN RANITIDINE

10248. Plaintiffs identified in the table below bring claims against Defendant Strides with respect to private-label product Wal-Zan ranitidine on behalf of themselves and their respective State Strides Wal-Zan Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Golbenaz Bakhitar	CA
Jonathan Ferguson	CA
Jeffrey Pisano	CO
Ronald Ragan	CO
Ronald Ragis	FL

1. Arizona

COUNT 612:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

10249. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of

ranitidine and injury), as if fully stated herein.

10250. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10251. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10252. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10253. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

10254. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10255. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10256. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of

developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10257. The latent injuries from which Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10258. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10259. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10260. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10261. Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Wal-Zan Medical

Monitoring Class members as frequently and appropriately as necessary.

10262. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10263. Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 613:
Negligent Product Containers – Arizona

10264. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of

ranitidine and injury), as if fully stated herein.

10265. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Strides Wal-Zan Medical Monitoring Class(for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10266. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10267. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10268. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10269. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10270. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10271. The latent injuries from which Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the

absence of exposure to this risk of harm.

10272. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10273. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10274. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10275. Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10276. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10277. Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 614:
Negligent Storage and Transportation – Arizona

10278. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10279. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10280. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10281. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10282. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10283. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10284. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10285. The latent injuries from which Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10286. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10287. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10288. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10289. Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10290. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10291. Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Wal-Zan Medical Monitoring Class members will continue to

face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 615:
Negligence – Failure to Warn Through Proper Expiration Dates – California

10292. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10293. This cause of action is brought by Golbenaz Bakhitar and Jonathan Ferguson, individually and on behalf of the California Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10294. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10295. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10296. Under California law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light

of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

10297. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10298. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10299. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10300. The latent injuries from which Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10301. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

10302. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10303. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10304. Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10305. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10306. Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 616:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

10307. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10308. This cause of action is brought by Golbenaz Bakhitar and Jonathan Ferguson, individually and on behalf of the California Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10309. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10310. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

10311. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes

"a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

10312. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

10313. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community when they learned of these risks.

10314. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

10315. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

10316. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer

economic losses and expenses associated with ongoing medical monitoring.

10317. The latent injuries from which Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10318. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10319. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10320. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10321. Plaintiffs and the California Strides Wal-Zan Health Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Wal-Zan Health Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Wal-Zan Health Medical Monitoring Class members as frequently and appropriately as necessary.

10322. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Wal-Zan Health Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10323. Plaintiffs and the California Strides Wal-Zan Health Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Wal-Zan Health Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 617:
Negligent Product Containers – California

10324. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of

ranitidine and injury), as if fully stated herein.

10325. This cause of action is brought by Golbenaz Bakhitar and Jonathan Ferguson, individually and on behalf of the California Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10326. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10327. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10328. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10329. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10330. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10331. The latent injuries from which Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally

recommended in the absence of exposure to this risk of harm.

10332. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10333. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10334. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10335. Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10336. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10337. Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 618:
Negligent Storage and Transportation – California

10338. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10339. This cause of action is brought by Golbenaz Bakhitar and Jonathan Ferguson, individually and on behalf of the California Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10340. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10341. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10342. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10343. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10344. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10345. The latent injuries from which Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10346. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10347. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10348. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10349. Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10350. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10351. Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Wal-Zan Medical Monitoring Class members will continue to

face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 619:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

10352. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10353. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10354. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10355. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10356. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10357. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

10358. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10359. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10360. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10361. The latent injuries from which Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10362. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers.

This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10363. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10364. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10365. Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10366. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10367. Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without

a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 620:
Medical Monitoring – Negligent Product Containers – Colorado

10368. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10369. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10370. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10371. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10372. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased

their risk of developing serious and potentially fatal Subject Cancers.

10373. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10374. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10375. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10376. The latent injuries from which Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10377. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10378. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10379. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10380. Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10381. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10382. Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 621:
Medical Monitoring – Negligent Storage and Transportation – Colorado

10383. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10384. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10385. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10386. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10387. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10388. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10389. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and

humidity.

10390. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10391. The latent injuries from which Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10392. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10393. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10394. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10395. Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10396. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 622:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

10397. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory

framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10398. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10399. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10400. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10401. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10402. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

10403. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe

when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10404. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10405. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10406. The latent injuries from which Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10407. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10408. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10409. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10410. Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10411. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10412. Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 623:
Medical Monitoring – Negligent Product Containers – Florida

10413. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10414. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10415. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10416. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10417. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10418. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10419. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10420. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10421. The latent injuries from which Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10422. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10423. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10424. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10425. Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will

facilitate the diagnoses of Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members as frequently and appropriately as necessary.

10426. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10427. Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 624:
Medical Monitoring – Negligent Storage and Transportation – Florida

10428. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify

FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10429. This cause of action is brought by Ronald Ragis, individually and on behalf of the Florida Strides Wal-Zan Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10430. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10431. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10432. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10433. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10434. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10435. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members have sustained a significantly

increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10436. The latent injuries from which Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10437. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10438. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10439. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10440. Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Wal-Zan Medical

Monitoring Class members as frequently and appropriately as necessary.

10441. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Wal-Zan Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10442. Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Strides Wal-Zan Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

CC. CAUSES OF ACTION AGAINST DEFENDANT STRIDES WITH RESPECT TO PRIVATE-LABEL PRODUCT EQUATE RANITIDINE

10443. Plaintiffs identified in the table below bring claims against Defendant Strides with respect to private-label product Equate ranitidine on behalf of themselves and their respective State Strides Equate Medical Monitoring Class under the laws of their respective states of usage. Each Plaintiff incorporates by reference the allegations specific to them from Section III.B and the allegations set forth in Section VI, *supra*, into their respective claims below.

Plaintiff Name	**State of Usage**
Tangie Sims	AZ
Jonathan Ferguson	CA
Jeffrey Pisano	CO

Ronald Ragan	CO
Michael Tomlinson	FL
Mynetta Hastings	WV

1. Arizona

COUNT 625:
Negligence – Failure to Warn Through Proper Expiration Dates – Arizona

10444. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10445. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10446. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10447. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10448. Under Arizona law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

10449. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10450. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10451. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10452. The latent injuries from which Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10453. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10454. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10455. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10456. Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10457. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10458. Plaintiffs and the Arizona Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 626:
Negligent Product Containers – Arizona

10459. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10460. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10461. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10462. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10463. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10464. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10465. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10466. The latent injuries from which Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10467. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10468. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10469. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides

Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10470. Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10471. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10472. Plaintiffs and the Arizona Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 627:
Negligent Storage and Transportation – Arizona

10473. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77

(describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10474. This cause of action is brought by Tangie Sims, individually and on behalf of the Arizona Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10475. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10476. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10477. Under Arizona law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10478. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10479. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic

Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10480. The latent injuries from which Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10481. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10482. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10483. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10484. Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Arizona Strides Equate Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10485. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Arizona Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10486. Plaintiffs and the Arizona Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Arizona Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

2. California

COUNT 628:
Negligence – Failure to Warn Through Proper Expiration Dates – California

10487. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10488. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10489. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10490. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10491. Under California law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

10492. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10493. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10494. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10495. The latent injuries from which Plaintiffs and the California Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10496. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10497. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10498. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10499. Plaintiffs and the California Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Equate Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10500. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10501. Plaintiffs and the California Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 629:
Strict Products Liability – Failure to Warn Consumers Through the FDA – California

10502. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10503. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10504. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10505. Plaintiffs incorporate herein by reference Paragraphs 907-36 (Additional Count-Specific Allegations) as to Defendant.

10506. Under California law, manufacturers, including Defendant, bear "a duty to convey warnings to a third party that can reasonably be expected to warn the consumer," which includes "a requirement to file adverse event reports with the FDA if that is the only available method to warn doctors and consumers," pursuant to *Coleman v. Medtronic, Inc.*, 223 Cal. App. 4th 413, 429, *as modified* (Feb. 3, 2014).

10507. This duty to warn, owed by Defendant, is ultimately owed to the consumer, not the FDA. Yet, where warning an end consumer or her doctor directly is difficult, manufacturers may fulfill their state law duty to warn by informing the FDA, which is a third party that is reasonably expected to pool and share safety-related information and publicize risks to the medical community.

10508. The FDA was reasonably expected to disseminate this information. No speculation is necessary on this point, because the FDA in fact did warn consumers and the medical community

when they learned of these risks.

10509. Because federal law requires generic drug labels to largely match branded drug labels, *see* 21 C.F.R. § 314.94(a), Defendant was not able to warn consumers directly of the cancer risks of NDMA in ranitidine. Rather than warning the FDA as a third party who would disseminate information to the public, Defendant failed to warn anyone through any medium.

10510. Specifically, Defendant failed to submit adverse event reports related to cancer for ranitidine, as required by FDA regulations. Defendant also failed to warn the FDA of the risks that ranitidine degrades into NDMA and causes cancer through other communication channels that were available, including ordinary correspondence with the agency or regulatory reporting.

10511. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the California Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10512. The latent injuries from which Plaintiffs and the California Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10513. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

10514. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10515. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10516. Plaintiffs and the California Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10517. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10518. Plaintiffs and the California Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the California Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 630:
Negligent Product Containers – California

10519. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10520. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10521. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10522. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10523. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10524. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10525. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the California Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10526. The latent injuries from which Plaintiffs and the California Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10527. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10528. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10529. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10530. Plaintiffs and the California Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10531. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10532. Plaintiffs and the California Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 631:
Negligent Storage and Transportation – California

10533. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the

breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10534. This cause of action is brought by Jonathan Ferguson, individually and on behalf of the California Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10535. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10536. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10537. Under California law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10538. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10539. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the California Strides Equate Medical Monitoring Class members have sustained a significantly

increased risk of developing serious and potentially fatal Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10540. The latent injuries from which Plaintiffs and the California Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10541. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10542. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10543. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the California Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10544. Plaintiffs and the California Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the California Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the California Strides Equate Medical

Monitoring Class members as frequently and appropriately as necessary.

10545. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all California Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10546. Plaintiffs and the California Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the California Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

3. Colorado

COUNT 632:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Colorado

10547. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to

warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10548. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10549. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10550. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10551. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10552. Under Colorado law, a manufacturer, including Defendant, has a duty of reasonable care to provide adequate warnings or instructions for use that adequately inform the user of any specific risk of harm that may be involved in any intended or reasonably expected use.

10553. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10554. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10555. As a direct and proximate result of Defendant's failure to provide an adequate

warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10556. The latent injuries from which Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10557. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10558. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10559. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10560. Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Strides Equate Medical Monitoring Class

members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10561. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10562. Plaintiffs and the Colorado Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 633:
Medical Monitoring – Negligent Product Containers – Colorado

10563. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory

framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10564. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10565. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10566. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10567. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10568. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10569. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10570. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10571. The latent injuries from which Plaintiffs and the Colorado Strides Equate Medical

Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10572. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10573. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10574. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10575. Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10576. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10577. Plaintiffs and the Colorado Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 634:
Medical Monitoring – Negligent Storage and Transportation – Colorado

10578. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10579. This cause of action is brought by Jeffrey Pisano and Ronald Ragan, individually and on behalf of the Colorado Strides Equate Medical Monitoring Class (for the purposes of this

Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10580. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10581. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10582. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10583. Under Colorado law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10584. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10585. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10586. The latent injuries from which Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of

ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10587. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10588. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10589. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10590. Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10591. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Colorado Strides Equate Medical Monitoring Class members in writing that they may

require frequent medical monitoring for the purpose of diagnosis.

Plaintiffs and the Colorado Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Colorado Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

4. Florida

COUNT 635:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – Florida

10592. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10593. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10594. The allegations in this Count apply to Strides during the time period in which it was

manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10595. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10596. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10597. Under Florida law, pharmaceutical manufacturers, including Defendant, have a duty of reasonable care to adequately warn of a particular risk that was known or knowable in light of the generally recognized and prevailing best scientific and medical knowledge available at the time of manufacture and distribution.

10598. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10599. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10600. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the Florida Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10601. The latent injuries from which Plaintiffs and the Florida Strides Equate Medical

Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10602. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10603. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10604. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10605. Plaintiffs and the Florida Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10606. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be

determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10607. Plaintiffs and the Florida Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 636:
Medical Monitoring – Negligent Product Containers – Florida

10608. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10609. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Strides Equate Medical Monitoring Class (for the purposes of this Count,

"Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10610. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10611. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10612. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10613. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10614. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10615. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the Florida Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10616. The latent injuries from which Plaintiffs and the Florida Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10617. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10618. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10619. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10620. Plaintiffs and the Florida Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10621. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10622. Plaintiffs and the Florida Strides Equate Medical Monitoring Class have an

inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the Florida Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 637:
Medical Monitoring – Negligent Storage and Transportation – Florida

10623. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10624. This cause of action is brought by Michael Tomlinson, individually and on behalf of the Florida Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10625. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10626. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-

Specific Allegations) as to Defendant.

10627. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10628. Under Florida law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10629. Defendant breached this duty by failing to implement or enforce policies to ensure its Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10630. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the Florida Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10631. The latent injuries from which Plaintiffs and the Florida Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10632. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the

development of, and health effects associated with, the Subject Cancers.

10633. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10634. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the Florida Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10635. Plaintiffs and the Florida Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the Florida Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the Florida Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10636. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all Florida Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10637. Plaintiffs and the Florida Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court,

Plaintiffs and the Florida Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

5. West Virginia

COUNT 638:
Medical Monitoring – Failure to Warn Through Proper Expiration Dates – West Virginia

10638. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10639. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10640. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10641. Plaintiffs incorporate herein by reference Paragraphs 880-906 (Additional Count-Specific Allegations) as to Defendant.

10642. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased

their risk of developing serious and potentially fatal Subject Cancers.

10643. Under West Virginia law, a manufacturer, including Defendant, has the duty to provide an adequate warning of the risks of its products if it is reasonably foreseeable that the product would be unreasonably dangerous if distributed without a particular warning.

10644. Defendant breached this duty for its Ranitidine-Containing Products. The expiration date improperly instructed Plaintiffs that its Ranitidine-Containing Products were safe when consumed long after manufacture, when in fact the products degraded into NDMA over time.

10645. Plaintiffs or their doctors would have read and heeded these warnings had they been included with the Ranitidine-Containing Products. Had such warnings been provided, Plaintiffs would have been made aware of the risks of developing the Subject Cancers associated with the use of the Ranitidine-Containing Products.

10646. As a direct and proximate result of Defendant's failure to provide an adequate warning of the risks of its Ranitidine-Containing Products, Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10647. The latent injuries from which Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10648. The medical monitoring regime should include, but is not limited to, baseline tests

and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10649. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10650. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10651. Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10652. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10653. Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of

long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 639:
Medical Monitoring – Negligent Product Containers – West Virginia

10654. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10655. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10656. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10657. Plaintiffs incorporate herein by reference Paragraphs 937-50 (Additional Count-Specific Allegations) as to Defendant.

10658. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10659. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in choosing and making the containers for its products.

10660. Defendant breached this duty by failing to utilize containers that would minimize the NDMA produced in its Ranitidine-Containing Products.

10661. As a direct and proximate result of this failure, excessive levels of NDMA built up in Defendant's Ranitidine-Containing Products, and therefore Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10662. The latent injuries from which Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10663. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10664. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and

treatment of the Subject Cancers.

10665. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10666. Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10667. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10668. Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

COUNT 640:
Medical Monitoring – Negligent Storage and Transportation – West Virginia

10669. Plaintiffs incorporate by reference each allegation set forth in paragraphs 25-77 (describing Generic Prescription Manufacturer Defendants), 318-23 (describing the regulatory framework for generics), 185-249 (describing the recall of ranitidine), 254-91 (describing the breakdown of ranitidine after ingestion), 292-304 (describing the breakdown of ranitidine before ingestion), 305-16 (describing Defendant's knowledge), 324-31 (describing failure to notify FDA), 332-59 (describing good manufacturing practices), 409–31 (describing the regulatory framework for drug manufacturers), 631-56 (describing Store-Brand Manufacturers' failure to warn), 796-840 (describing Strides-specific allegations), and 975-85 (describing Plaintiffs' use of ranitidine and injury), as if fully stated herein.

10670. This cause of action is brought by Mynetta Hastings, individually and on behalf of the West Virginia Strides Equate Medical Monitoring Class (for the purposes of this Count, "Plaintiffs"), against Strides (for the purposes of this Count, "Defendant").

10671. The allegations in this Count apply to Strides during the time period in which it was manufacturing Ranitidine-Containing Products. The relevant time period is alleged in paragraphs 172-84, which are incorporated by reference.

10672. Plaintiffs incorporate herein by reference Paragraphs 951-74 (Additional Count-Specific Allegations) as to Defendant.

10673. Plaintiffs' exposure to Ranitidine-Containing Products has significantly increased their risk of developing serious and potentially fatal Subject Cancers.

10674. Under West Virginia law, a pharmaceutical manufacturer, including Defendant, has a duty to exercise reasonable care in transporting and storing products.

10675. Defendant breached this duty by failing to implement or enforce policies to ensure Ranitidine-Containing Products and ranitidine API remained free from excessive heat and humidity.

10676. As a direct and proximate result of these systematic failures, excessive levels of NDMA built up in the Ranitidine-Containing Products each Brand-Name and Generic Manufacturer Defendant manufactured, stored, and transported, and therefore Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members have sustained a significantly increased risk of developing the Subject Cancers and have suffered and will suffer economic losses and expenses associated with ongoing medical monitoring.

10677. The latent injuries from which Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members suffer require specialized testing (with resultant treatment) that is not generally given to the public at large. The available monitoring regime is specific for individuals exposed to products known to significantly increase the risk of the Subject Cancers because of ingesting Ranitidine-Containing Products and is different from that normally recommended in the absence of exposure to this risk of harm.

10678. The medical monitoring regime should include, but is not limited to, baseline tests and diagnostic examination that will assist in early detection and diagnosing the Subject Cancers. This diagnostic program will facilitate treatment and interventions that will mitigate the development of, and health effects associated with, the Subject Cancers.

10679. The available monitoring regime is reasonably necessary according to contemporary scientific principles within the medical community specializing in the diagnosis and treatment of the Subject Cancers.

10680. By monitoring and testing Plaintiffs, the risk that Plaintiffs and the West Virginia

Strides Equate Medical Monitoring Class members will suffer long-term injuries, disease, and losses without adequate treatment will be significantly reduced.

10681. Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members seek creation of a Court-supervised, defendant-funded medical monitoring program which will facilitate the diagnoses of Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members for the Subject Cancers. The medical monitoring should include a trust fund to pay for the medical monitoring and diagnosis of Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members as frequently and appropriately as necessary.

10682. Accordingly, Defendant should be required to establish a medical monitoring program that includes, among other things: (a) establishing a trust fund, in an amount to be determined, to pay for the medical monitoring of everyone who has taken Ranitidine-Containing Products for the purpose of diagnosis, as frequently and appropriately as necessary; and (b) notifying all West Virginia Strides Equate Medical Monitoring Class members in writing that they may require frequent medical monitoring for the purpose of diagnosis.

10683. Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class have an inadequate remedy at law in that monetary damages alone cannot compensate them for the risk of long-term physical and economic losses due to ingesting Ranitidine-Containing Products. Without a court-approved medical monitoring program as described herein, or established by the Court, Plaintiffs and the West Virginia Strides Equate Medical Monitoring Class members will continue to face an unreasonable risk of injury and disability and remain undiagnosed.

X. PRAYER FOR RELIEF

Plaintiffs, on behalf of themselves and the proposed State Classes, respectfully request that the Court:

A. Determine that this action may be maintained as a class action pursuant to Federal Rules of Civil Procedure 23(a), 23(b)(2), 23(b)(3), and/or 23(c)(4), direct that reasonable notice of this action be given to the State Classes, appoint Plaintiffs as named representatives of their respective State Classes, and appoint Plaintiffs' counsel as Class Counsel;

B. Enter judgment against Defendants and in favor of Plaintiffs and the State Classes;

C. Grant equitable relief in the form of a medical monitoring program to be funded by Defendants;

D. Award Plaintiffs and the State Classes their costs of suit, including reasonable attorneys' fees, as provided by law;

E. Award any other relief that is deemed just and proper.

XI. JURY DEMAND

Pursuant to Federal Rule of Civil Procedure 38, Plaintiffs, on behalf of themselves and the State Classes, demand a trial by jury on all issues to triable.

DATED: February 22, 2021

Respectfully submitted,
